

User Manual

Robin ProLine SIP
Robin ClassicLine SIP
Robin SmartView SIP
Robin Compact SIP

Software version 3.6 or higher

Manual version: 3.2.2
Date: 02-05-2018

About this manual

This manual describes the installation and programming of the Robin SmartView SIP, the Robin Compact SIP, the Robin ClassicLine SIP and the Robin ProLine SIP unit in combination with software version 3.6.x. You can update the software of the Robin to the latest version. For instructions on updating see page 62 of this manual.

This manual applies to the Robin SmartView SIP with 1, 2, 4 of 6 buttons, the Robin Compact SIP, the Robin ProLine SIP with 1, 2, 4 buttons, the Robin ClassicLine SIP with 1, 2, 4 buttons and the Robin ProLine SIP with Keypad.
(Part numbers: C01060 - C01067 and C01068, C02050 - C02058, C03050 - C03058, C03071 - C03074).

If you have any questions after reading this manual, please contact us at:

1 Introduction

1.1 Robin SmartView / ProLine SIP Door Intercom

Integrated functions

The Robin Compact SIP has many integrated functions in one single device:

- Telephone device with one piezo push-button
- SIP support for audio
- Door opener
- Advanced event mechanism
- Extended API (Application Programming Interface)

The Robin SmartView SIP (Robin SV) has the same feature set as the Robin Compact SIP and offers the following additional features:

- SIP support for audio *and* video
- High-Definition, full colour camera with a wide-angle lens
- Security camera with movement- and audio detection
- RTSP streaming (audio and video)

The Robin ProLine SIP / ClassicLine SIP (Robin ProLine) is a new addition to the Robin portfolio. it is equipped with the same features as the Robin SV and offers the following additional features:

- Premium design
- Equipped with one, two, four buttons or a Keypad (ProLine only)
- Backlit buttons for more convenience during night time use
- Engravable illuminating labels
- Recessed screws
- Modified GUI-layout
- Brass housing for the ClassicLine SIP

1.2 Robin SmartView / Robin Compact SIP / ProLine SIP features

Easy to install

A single module is all that has to be mounted; there are no extra modules necessary.

Simple operation

The Robin devices with 1, 2 or 4 buttons are devices that can dial predefined phone extensions. The door opener relay is activated via the device to which the call is directed. On the Robin devices with keypad, the call is set up by typing a preset number on the keypad. It also features a PIN code feature that can be used to unlock the door. All Robin intercoms with an integrated camera are capable of sending e-mails containing a photograph of the person using the intercom to predefined recipients.

SIP communication

The Robin uses the Session Initiation Protocol (SIP). This means that the intercom can be connected to any IP-PBX or VoIP provider that supports the SIP protocol. To check compatibility please see the compatibility chart on the supplied USB drive or on our support website: <http://support.robin.nl>.

Door opener

The potential free (dry contact) relay switch embedded in the Robin is activated by typing in a key combination at the dialled device. The key combination can be specified in the WEB-GUI of the Robin. The relay can be used to open a door, a gate or a barrier.

Built-in camera (on Robin devices with build-in camera)

A real-time video image of the person using the Robin is displayed on the screen of the H.264 compatible videophone or softphone as soon as a call is answered.

! Note: When using an IP-PBX or VoIP provider, check the distributor of the IP-PBX or the VoIP provider for H.264 video compatibility. !

High-Definition video quality (on Robin devices with build-in camera)

The build-in camera of the Robin is capable of displaying the video image in High-Definition. The image can be set to an aspect ratio of 4x3 or 16x9. A maximum of three simultaneous video streams is supported.

High-quality sound reproduction

Thanks to the advanced audio DSP in the Robin, its sound quality is exceptionally good without any echo or interference.

Security camera function (on Robin devices with build-in camera)

The built-in camera can also be used for surveillance purposes. The Robin is able to deliver the video stream to many Video Management Software systems (VMS) in two formats, MJPEG and H.264 (RTSP). It is also able to photograph the person using the intercom and sending e-mails with that photo to predefined recipients.

Picture To Email (on Robin devices with build-in camera)

All Robin intercoms running software version 3.5.0 or higher are equipped with a Picture To Email function. It will send an email with a photo of the visitor to an (per button or preset) email address of choice. The document: How-To_Picture2Email_ENG.pdf on the provided USB drive describes the configuration of this function. You can also download this document on our support site: <http://support.robin.nl>

No separate power supply

The Robin is powered via 'Power-over-Ethernet' (PoE IEEE 802.3af). This eliminates the need for a separate power supply; connection to a PoE network switch or Midspan is all that is necessary.

Web-based configuration

The Robin can be configured on a PC or Mac via a web browser (e.g. Firefox, Chrome, Safari). Using a web browser, modification of all the settings for the Robin is easy, regardless of the physical location of the Robin SV.

In addition to configuring and programming the Robin via the web browser, it also offers the option of viewing any activity in the vicinity of the Robin in real time with the built-in camera.

Compatible with WEBRelay

The Robin is compatible with an external IP relays, the ControlByWeb WEBRelay Quad-LS. This external device is equipped with 4 build-in relays and can be connected to the LAN. The 'Events' mechanism in the Robin can control the four relays (page. 55).

2 Operation

2.1 Operating the door phone

2.1.1 Robin with button(s)

To ring the door phone, press on the bell-sign on the Robin. The unit will play a ringing sound and the predefined telephone set will be called.

2.1.2 Robin ProLine SIP with keypad

The Robin with keypad has 16 keys.

- Keys 1, 2, 3, 4, 5, 6, 7, 8, 9 and 0, use these keys to type the desired preset
- Green call button, start calling the just entered preset
- Red disconnect button, disconnect the call
- The 'i'-key, call a programmed preset
- The 'C'-key, clear the input
- The '*'- and '#'-key, used for entering a PIN code

The Robin with keypad offers you the ability to create a call list. This call list contains presets (for example apartment numbers) to which you can assign up to three phone numbers, an e-mail address (optional) and a PIN code (optional). By dialing the preset number on the intercom it will start calling phone number one. If the first number is engaged or not answering it will continue with the second number. If the second number is engaged or not answering it will continue with the third number. It also features a 'i-button' on the Keypad. This button can be programmed to dial a predefined preset, for instance the reception or building manager.

Keypad specific settings such as beep volume, -frequency or backlight can be changed in the menu - Telephony-Call settings-General-.

2.2 Answering

You answer a call initiated by the Robin by answering the phone that is being called. In case you use a H.264 compatible videophone or softphone, the video picture of the built-in camera is displayed on the screen.

2.3 Controlling the built-in door opener

The built-in door opener is controlled with predefined keys on the telephone set that answers the call. When you activate the door opener, the attached door, fence, barrier, etc. will open.

You can change the default code to open the door in the interface of the Robin in the menu -System-Switch- (default code: ##).

2.4 Access using a PIN code (Robin ProLine SIP with keypad only)

The Robin with keypad can activate the door opener by entering a PIN code on the Keypad. This PIN code is preset depended, so every preset can have his own PIN code. When the correct PIN code is entered, the intercom can activate the build-in relay switch or an external relay switch using the 'Events' mechanism.

To enter a PIN code on the intercom, start by pressing the '*'-key and end it by pressing the '#'-key. Assuming the PIN code is 123456 you will need to enter: *123456# to unlock the door. When a valid PIN code is entered a tune will be played by the intercom and the build-in relay switch will be activated.

3 Installation

3.1 Package contents

- The Robin
- USB stick containing the manuals and the 'Robin Discovery Utility' software
- Anti-theft Allen key
- 4 anti-theft screws
- 4 wall plugs (6mm)
- Drilling template
- Tie-wrap

3.2 Installation dimensions Robin SV / SIP

The installation dimensions of the Robin SV / SIP differ from the dimensions of the Robin ProLine SIP models.

The dimensions of the flush-mount box are:

- | | |
|---------------------|----------------------------|
| ▪ 1 button - C01110 | 88 (B) x (47 (D) x 162 (H) |
|---------------------|----------------------------|

3.3 Installation dimensions Robin ProLine SIP

The dimensions of the Robin ProLine SV are identical for all versions. The 1, 2, 4 button and the Robin with Keypad all use the same size of surface- and flush mount boxes.

The dimensions of the flush-mount box are:

- | | |
|---------------------------|----------------------------|
| ▪ 1, 2, 4 button - C01112 | 88 (B) x (47 (D) x 239 (H) |
|---------------------------|----------------------------|

3.4 Tools and materials required for mounting

The following tools and materials are required when mounting the Robin:

- Core drill, 90 mm in diameter
- Masonry drill, 6 mm in diameter
- Stone chisel
- General set of tools
- Anti-theft Allen key (supplied)
- Anti-theft screws (supplied)
- 6mm wall plugs (supplied)
- Drilling template (supplied)
- Tie wrap (supplied)

3.5. Mounting instructions

Follow the step-by-step plan described below for problem-free mounting of the Robin.

Step-by-step plan:

1. Drill holes of 90 mm in diameter and 60 mm in depth using the core drill.
Use the drilling template supplied in the package for this.
2. Remove the cores from the drilling using the stone chisel.
Shape the hole so that the plastic housing of the Robin fits with room to spare.
3. Feed the cable into the hole, leave enough excess length for a loop in the hole.
4. Drill the four fixing holes for the front panel using the drilling template and insert the wall plugs supplied with the set into the holes.
5. Connect the Ethernet cable to the clamp connector. (Chapter 3.5)
6. Optional - connect the cable for operating the door switch to the clamp connector.
7. Secure the cable to the plastic housing using a tie-wrap.
8. Position the Robin in the hole in such a way that the looped cable fits neatly behind the device.
9. Fix the device securely in place using the anti-theft screws supplied in the package.

3.6 Connecting the Robin

Connecting the Robin

To connect the Robin, use an Ethernet cable, type CAT5(e) or CAT6. The colours of the individual wires match the colour codes below the connector.

To connect to the built-in relay switch, use a second cable.

Colour codes

| | |
|----------|------------------------------------|
| ▪ OR / W | Orange / white |
| ▪ OR | Orange |
| ▪ GR / W | Green / white |
| ▪ BL | Blue |
| ▪ BL / W | Blue / white |
| ▪ GR | Green |
| ▪ BR / W | Brown / white |
| ▪ BR | Brown |
| ▪ REL_NO | Relays connection, 'Normally open' |
| ▪ REL_CC | Relays connection, 'Common' |

4 System installation

4.1 Requirements prior to installation

- Network connection with PoE (Power over Ethernet) is used to power the intercom; the power supply must be 802.3af compatible).
- PC with web browser.
- The following web browsers are supported:
 - FireFox
 - Safari
 - Google Chrome
- USB stick containing the 'Robin Discovery Utility' software and manuals (supplied)
- Network with or without DHCP support (DHCP support is recommended)
- Network cable
- Optional - Two-core cable for door switch operation

4.2 Connecting the Robin to a network

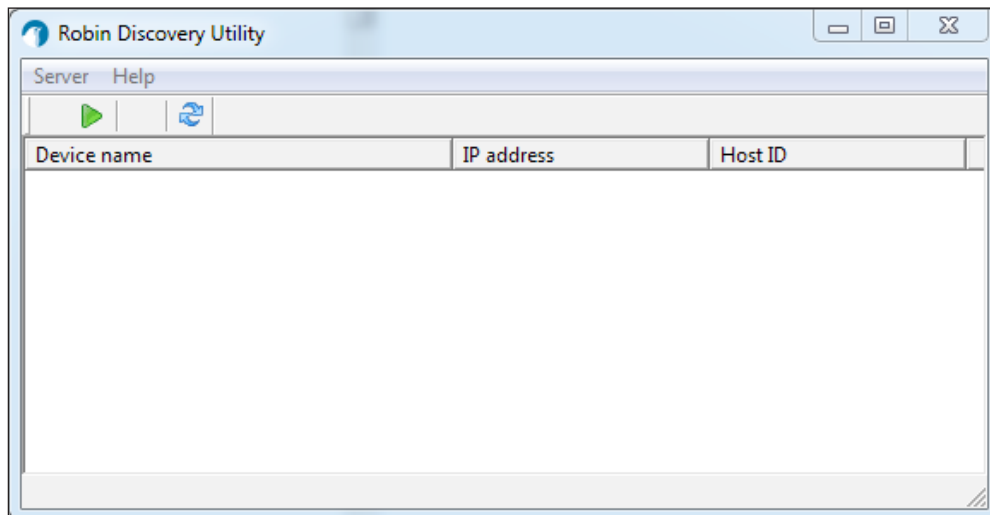

Connect the Robin to the network via the network connection socket on the rear. The Robin will boot automatically. This can take up to 60 seconds.

! Note: The length of the Ethernet cable may not exceed 100 metres. This is a limit of the Ethernet standard. !

! Note: Internet Explorer can be used for the base configuration of the Robin SV, but can not be used for the 'AGC' and the 'Motion' settings. This is because Internet Explorer doesn't support MJPEG video. !

Windows users:

Copy the 'Robin Discovery Utility' software to a PC that is connected to the network. Start the 'Robin Discovery Utility' software and click the "Play" button. The software will scan for Robin devices in the network. When a Robin is detected, it is displayed in the list. Double-click on the Robin you would like to configure; the web interface for the selected Robin will show.

*Apple Macintosh users:*

To detect and access the Robin on a Mac, use the Internet browser, 'Safari'. In the 'bookmark overview' of Safari (option-command-B), you will see the 'Bonjour' section in the left-hand column. It will display all the devices detected in your LAN network on the right-hand side of your window, including the Robin. Double-click on the Robin you would like to configure; the web interface for the selected Robin is displayed now.

Linux users:

Enter the IP address of the Robin in the address bar of the web browser that is installed on your PC in order to access the web interface.

The Robin can now be configured via the web interface (see Chapter 5, Configuration).

5 Configuration

5.1 Logging in to the Robin

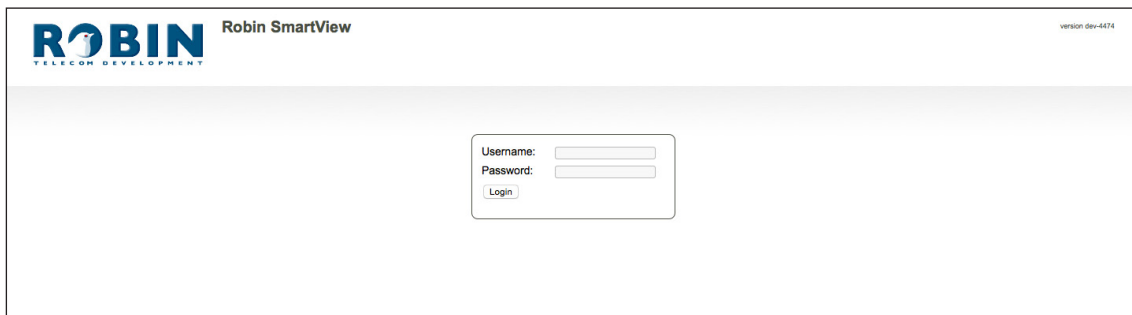

The Robin can be used accessed as an 'Administrator' or as a 'User'.

- The Administrator can configure all settings of the Robin. To initially configure the Robin you will need to login as an Administrator.
- The User can only watch live video and optionally control the door opener. A User can't modify settings of the Robin.

The login credentials can be changed in the web interface of the Robin. The default credentials are:

- Administrator - Login: admin, Password: 123qwe
- User - Login: user, Password: 123qwe

We recommend changing the default passwords after initial installation and set-up of the Robin.

The screenshot displays the web interface for Robin SmartView. At the top left is the 'ROBIN TELECOM DEVELOPMENT' logo. To its right is the text 'Robin SmartView'. In the top right corner, it says 'version dev-6474'. The central part of the page features a login box with two input fields labeled 'Username:' and 'Password:', and a 'Login' button below them.

We assume here that the network supports DHCP ('Dynamic Host Configuration Protocol'); if so, all settings such as the IP addresses, netmask, gateway and DNS are automatically populated.

DHCP is a default setting of the Robin. If the network does not offer DHCP, the network details must be set manually.

5.2 Configuration of the Robin

The configuration program for the Robin features 5 sections; 'Telephony', 'Audio', 'Video', 'Network' and 'System'.

'Telephony'

In the 'Telephony' section, you configure all of the settings that are required for the communication part of the Robin.

'Audio'

In the 'Audio' section, various modifications to the sound and sound processing features of the Robin can be made, such as loudspeaker volume, microphone sensitivity and echo suppression.

'Video' (on Robin devices with build-in camera)

In the 'Video' section, you can optimise the image quality, view the live video and set the areas of the image to which the camera will respond (motion).

'Network'

In the 'Network' section, you can view and change the network configuration settings for the Robin.

'System'

In the 'System' section, you can view and change the settings that influence standard operation of the Robin. It also contains the 'log files', for easier problem solving.

! Note: In the Robin software you'll note 'APPLY SETTINGS' buttons. Use these buttons to confirm and activate all the changed settings. !

5.2.1 Telephony

5.2.1.1 Telephony / SIP

This is where you enter the data required for registering on an IP-PBX or with a SIP provider. If the Robin is used for a direct connection (Peer2Peer / P2P) to the telephone handset (without using an IP-PBX or SIP provider), registration is not required.

The Robin can make use of a second SIP proxy / Register server for failover purposes. It will only be activated if the 'Primary' server fails.

! Note: A second SIP proxy or Register server can only be used if both the SIP proxy or Register server use the same login credentials. We also advise to set the 'Expires' time to 300 seconds. (The maximum time between switching servers will be 5 minutes) !

| ▪ Video RTP port end | Enter the highest IP port that may be used for the RTP video stream |
| ▪ RTP port random | Use random RTP ports (within the specified range) |
| ▪ Use NAT | Select this option when an NAT firewall is set up between the Robin and the SIP PBX or SIP provider. (You can change the NAT settings in -Network-NAT-) |
| ▪ Keep alive | Enable keep alive packages |
| ▪ Enable REFER | Accept 'REFER' packages (on by default) |

5.2.1.2 Telephony / Phonebook

Multiple telephone numbers can be entered in the phone book. These can be used as input elsewhere, for example when setting up 'Schedules'.

A 'Profile' can be associated with each 'Phonebook entry'. A 'Profile' is a set of audio and video settings. This allows definition of individual settings for each telephone number.

When using a Robin ProLine with Keypad, an extra menu will be visible, called 'Preset'. Within the 'Preset' menu you can create a list with presets. Every preset can contain up to three phone numbers, for instance a fixed phone, a mobile phone and an extra phone. As soon as a preset is chosen using the Keypad, the intercom will first try to connect to the first number. If the first number is engaged or not answering it will continue with the second number. If the second number is engaged or not answering it will continue with the third number. Each preset can also contain an e-mail address and a PIN code. The e-mail address can be used for sending an e-mail containing a photo of the person using the intercom. The PIN code of (6 digits) can be used to open the door.

Phonebook:

The green '+' creates a new line.

The '>>' behind a line opens the details for this line.

The red X behind a line deletes the line from the list.

| | |
|------------------|--|
| ▪ Description | The name that is associated with this number |
| ▪ Number | The value entered for the telephone number (see comment) |
| ▪ Profile | If required, you can select a 'Profile' for this number |
| ▪ Allow register | Select this option if the Robin SV has to support a 'Peer to Peer' connection with a telephone set (*) |

! Note: The number can be entered in multiple ways.

1. Just the number (e.g. 104, 1002, 6032 etc.). The handset is located on a connected IP-PBX in the same network or using a VoIP provider.
2. The number, followed by the IP address of the handset that is to be dialled (e.g. 1000@10.0.0.53, 102@192.168.1.21 etc.). The handset and the Robin are connected to each other directly, i.e. the call is not routed via a IP-PBX or VoIP provider. The Robin SV dials the handset directly.

* **Peer to Peer connection:** If a direct connection between the Robin and a telephone set is required - without the use of a IP-PBX or VoIP provider - please check our whitepaper: *How-To_Peer-to-ENG.pdf* on the supplied USB drive or on our support website: <http://support.robin.nl>

Profiles:

Define profiles. A profile is a set of audio- and video related settings.

The green '+' creates a new line.

The '>>' behind a line opens the details for this line.

The red X behind a line deletes the line from the list.

Call priority:

The Robin can dial up to three numbers in a set sequence. If the first number is engaged or not answering * it will continue with the second number. If the second number is engaged or not answering it will continue with the third number.

For the 2 and 4 button equipped Robins the call priority settings can be defined for each individual button.

| | |
|----------|----------------------------------|
| ▪ First | Select the first number to dial |
| ▪ Second | Select the second number to dial |
| ▪ Third | Select the third number to dial |

(*) Change the period of time in -Telephony-Call settings-General- using the 'No answer timeout' option.

Schedules:

The Robin features a 'Schedule' function. The schedules can be defined in the menu -System-Schedules-.

This function allows you to set multiple timeslots: e.g. office hours, lunch break, etc. Consequently, during the lunch break for example, the Robin can be set to dial a different telephone number from that configured for normal working hours.

The timeslots are not prioritised so they must be set consecutively, e.g.:

8:30-12:29 morning -> call reception

12:30-13:00 lunch -> call a mobile phone

13:01-17:00 afternoon -> call reception

! Note: When the 'Schedule' function is in use, timeslots take priority over the 'First, Second and Third' settings in -Telephony-Call settings-Call priority-. The intercom checks whether a timeslot is active based on the current time, if not, it reverts to the settings for 'First, Second and Third'. !

For the 2 and 4 buttons equipped Robins the schedule settings can be defined for each individual button.

Timeslots:

The green '+' creates a new line.

The '>>' behind a line opens the details for this line.

The red X behind a line deletes the line from the list.

| | |
|-------------|-----------------------------|
| ▪ Schedule | Select the defined schedule |
| ▪ Extension | Select the number to dial |

| | |
|---------------------|--|
| ▪ Auto answer | Enables auto answering of incoming calls to the intercom |
| ▪ Auto answer delay | Answer incoming calls after X seconds |
| ▪ No answer timeout | End call attempt after X seconds |
| ▪ Max call duration | Maximum duration of a call (0=no limit) |
| ▪ Call status | Displays the status of the phone functionality of the Robin |
| ▪ Phone fps | The maximum video frame rate during a conversation (default value is 10) |

5.2.1.4 Telephony / Call settings (Robin with Keypad)

Keypad:

| | |
|--|--|
| ▪ Preset to call when i-button pressed | Select the preset (menu -Telephony-Phonebook-) for the 'i'-key on the Keypad |
| ▪ Backlight brightness | Change the intensity of the Keypad backlight |
| ▪ Beep frequency | Change the frequency of the Keypad keys beep |
| ▪ Beep duration | Change the duration of the Keypad keys beep |
| ▪ Max preset length | Define the maximum length of the preset. If for example the length is three, 999 is the highest number to dial. (for two it is 99 en for one it is 9). If the maximum length is reached the intercom will dial automatically |

General:

| | |
|---------------------|--|
| ▪ Auto answer | Enables auto answering of incoming calls to the intercom |
| ▪ Auto answer delay | Answer incoming calls after X seconds |
| ▪ No answer timeout | End call attempt after X seconds |
| ▪ Max call duration | Maximum duration of a call (0=no limit) |
| ▪ Call status | Displays the status of the phone functionality of the Robin |
| ▪ Phone fps | The maximum video frame rate during a conversation (default value is 10) |

5.2.1.5 Telephony / Call log

The call log presents an overview of all the call events to and from the Robin.

You can delete the complete log file using the red X alongside the 'Delete all rows' label. You can delete individual log lines by clicking the red X behind the log line in question.

Call log:

| Time | Number | Direction | Answered | Result |
|---------------------------|------------|-----------|----------|----------|
| 1970-01-01 01:00:37 +0100 | @10.0.0.99 | outgoing | ✓ | hangup ✗ |
| 1970-01-01 01:01:03 +0100 | @10.0.0.99 | outgoing | ✓ | hangup ✗ |
| 1970-01-01 01:01:28 +0100 | @10.0.0.99 | outgoing | ✓ | hangup ✗ |
| 1970-01-01 01:01:57 +0100 | @10.0.0.99 | outgoing | ✓ | hangup ✗ |

5.2.1.6 Telephony / Control

The Control menu allows you to manually initiate and end a call from the Robin.

Call:

| | |
|---------------------------------|---|
| ▪ Call | Initiate a call using the 'Call' button |
| ▪ Hangup | End a call using the 'Hangup' button |
| ▪ Registration status | Shows the IP-PBX or VoIP Provider registration status |
| ▪ Registration status secondary | Optional: Shows the secondary IP-PBX or VoIP Provider registration status |
| ▪ Call status | Shows the Robins call status (idle, ringing, connected) |

5.2.2 Audio

5.2.2.1 Audio / Settings

In this menu you can control all audio related settings such as speaker volume and microphone sensitivity.

Settings:

| | |
|--|---|
| <ul style="list-style-type: none"> Speaker volume | Change the speaker volume |
| <ul style="list-style-type: none"> Microphone sensitivity | Change the microphone sensitivity |
| <ul style="list-style-type: none"> Tone volume | Change the tone volume |
| <ul style="list-style-type: none"> Mute | <p>Tones incoming: All incoming tones of a call (phone -> Robin)</p> <p>Tones all: All of the Robin generated tones</p> <p>All audio: Mute all output (listen-in function)</p> |
| <ul style="list-style-type: none"> Generate test tone | Play a test tone |
| <ul style="list-style-type: none"> Echo canceler | Select the echo canceller mode |
| <ul style="list-style-type: none"> Denoise | By default, all background noise will be filtered to improve the sound quality. In a loud environment the sound quality might improve by disabling this feature |
| <i>Half duplex setting only:</i> | |
| <ul style="list-style-type: none"> Vox level | Set the switch level of the microphone / speaker |
| <ul style="list-style-type: none"> Vox hyst | Modify this setting to smoothen the switch between sending and transmitting |

The echo canceller can be set to:

- Off, no echo cancellation
- Adaptive, active echo cancellation. Allows two-way simultaneous communication
- Half-duplex, makes use of sound detection to switch between speaker or microphone. This disables simultaneous two-way communication. You either speak or listen.

With the echo canceller set to 'half duplex' a 'Vox level' slider is visible. It allows you to set the switch level of the microphone / speaker

! Note: Tuning the 'Vox level' is necessary to establish good communication when set to 'half-duplex'. !

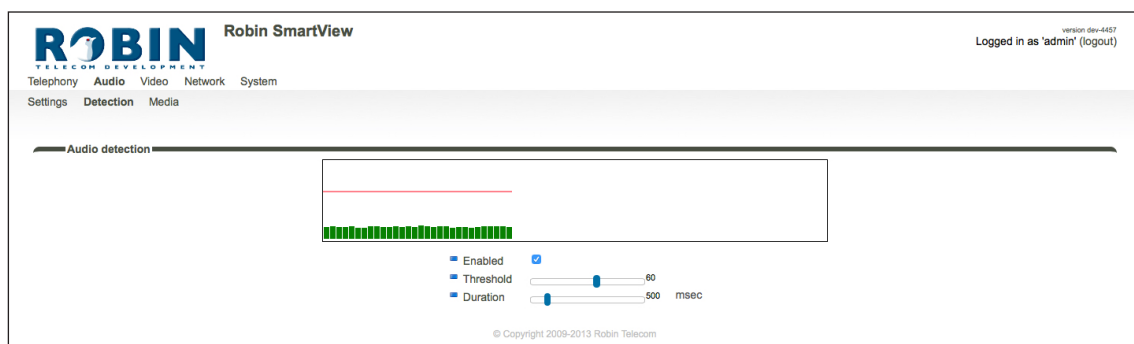

5.2.2.2 Audio / Detection

The Robin is capable of detecting sound through its microphone.

This detection can trigger 'Actions' such as activation of a relay switch or automatic calling to a phone set. These actions can be defined in the menu -System-Events-.

Depending on the location of the Robin and the type of sound that should trigger the detection, two parameters can be set: the volume and the duration.

Short audio spikes can be filtered by increasing the duration setting. Background noise can be filtered by increasing the threshold.

Audio detection:

| | |
|------------|--|
| ▪ Enabled | Enable or disable the audio detection |
| ▪ Treshold | Change the volume threshold of the detection |
| ▪ Duration | Change the audio duration of the detection |

5.2.2.3 Audio / Media

The Media menu allows you to import audio files into the intercom. These files can be used (played back):

- For events
- For phone related functions (ring, ring back, disconnect, busy)

Upload:

| | |
|-----------------|---|
| ■ Upload status | Shows the upload status |
| ■ Status | Shows the result of the uploaded file |
| ■ File | Select the file to upload (wav or mp3), max. size 1MB |

Media list:

The green '+' creates a new line.

The '>>' behind a line opens the details for this line.

The red X behind a line deletes the line from the list.

| | |
|--------|--|
| ■ Name | The name that is associated with this audio file |
| ■ Play | Plays the audio file through speaker of the intercom |

Tone selection:

Select an audio file to play for a selected phone related function (ring, ringback, disconnect, busy).

The green '+' creates a new line.

The '>>' behind a line opens the details for this line.

The red X behind a line deletes the line from the list.

| | |
|---------|-----------------------------------|
| ▪ Tone | Select the phone related function |
| ▪ Media | Select the audio file |

5.2.3 Video (on Robin devices with build-in camera)

5.2.3.1 Video / Live

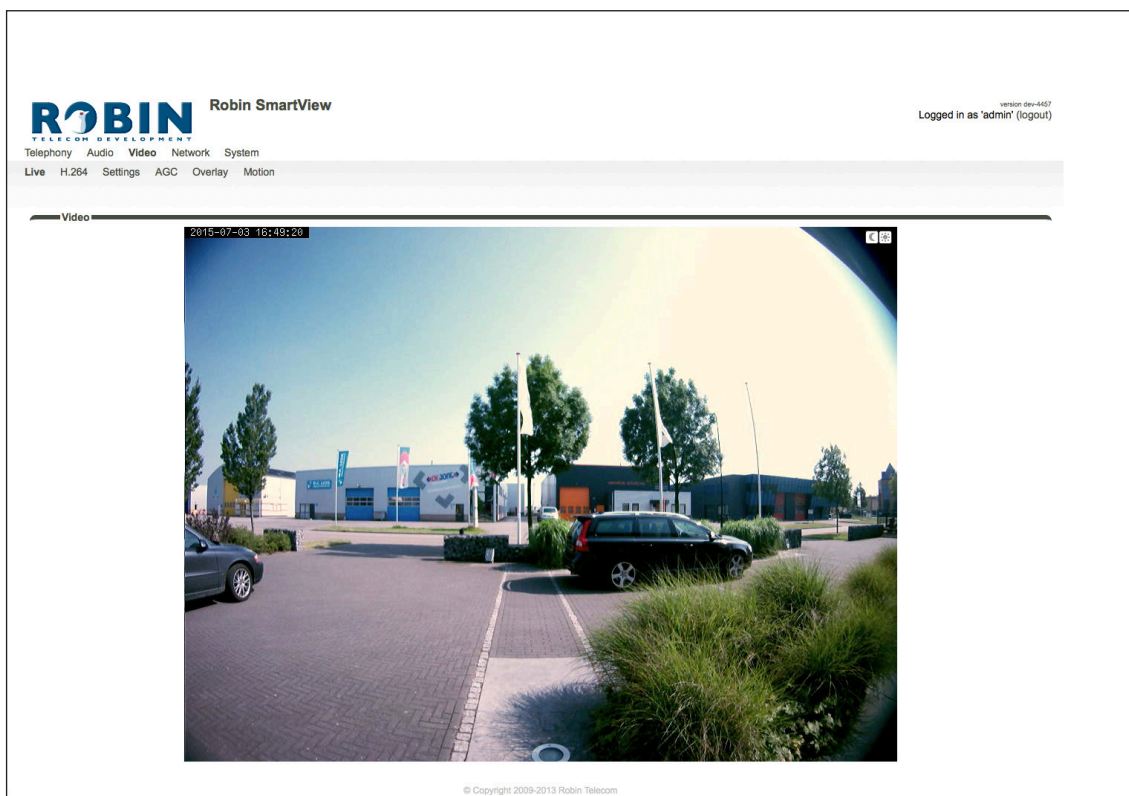

Shows real time video captured by the camera. Double-click on the image to toggle between full screen video or default size video.

By using the on-screen controls in the upper right corner of the image you can modify the brightness of the image.

The three buttons below the video frame functions as controls for the built-in relays switch. They are used for:

- Switching off (Close)
- Switching on (Open)
- Switch on and after a predefined time automatically off (Pulse)

! Note: These three buttons are only visible if the option: ' User can control door opener' (-System-Security-) is enabled. !

5.2.3.2 Video / H.264

Shows near-real time video and audio of the camera. For the video the H.264 protocol is used, this will cause a delay of approximately 10 seconds.

5.2.3.3 Video / Settings

You can change all the camera related settings here.

- Settings: settings that are associated with the video quality
- Image - settings that are associated with the image quality
- Correction / PTZ - settings that are associated with the image frame
- Encoder: settings that are associated with the degree of image compression

Settings:

The 'Sensor mode' menu allows you to choose between two optimization profiles. You can choose between Performance or Quality.

- Performance - The Robin settings will be optimized to achieve the highest possible frame rate. The video quality will lose some detailing.
- Quality - The Robin settings will be optimized for the best video quality possible. The frame rate will be limited to approximately 15 frames per second.

The 'Resolution' menu allows you to select the video image resolution. Choose between 'VGA', 'SD' or 'HD'.

- VGA - The video image will be presented with a vertical resolution of 480 pixels
- SD - The video image will be presented with a vertical resolution of 576 pixels
- HD - The video image will be presented with a vertical resolution of 720 pixels

The 'Sensor aspect' menu allows you to choose the preferred aspect ratio of the video image.

- 4x3 - The default aspect ratio
- 16x9 - Widescreen

Image:

| | |
|----------------------------|---|
| ▪ Brightness | Changes the brightness of the video image |
| ▪ Contrast | Changes the contrast of the video image |
| ▪ Saturation | Changes the colour saturation of the video image |
| ▪ Auto gain control (AGC) | 'Automatic Gain Control' automatically matches video image exposure to the light circumstances |
| ▪ Fluorescent light | Activate this function if artificial light sources in a room cause interference, e.g. TL strip lighting |
| ▪ Auto white balance (AWB) | 'Auto White Balance' automatically matches the colour temperature of the video image to the circumstances |

PTZ:

! Note: The PTZ menu will only be visible if the option 'Correction / PTZ' is selected. This will affect the image; the resolution and the framerate will decrease. !

| | |
|-----------------|--|
| ▪ Sharpen | Enables the sharpening filter |
| ▪ Interpolation | Improve the image quality by using interpolation |
| ▪ Pan | Move the image horizontally |
| ▪ Tilt | Move the image vertically |
| ▪ Zoom | Zoom near / far. 0: wide, 100: tele, range 101 - 300 is a digital zoom |

Encoder:

| | |
|----------------|--|
| ▪ Jpeg quality | Allows you to change the quality of the 'Live' video images in the web browser (higher quality but more bandwidth usage) |
|----------------|--|

! Note: Higher quality will put extra load on the bandwidth. !

H.264 Encoder

Change the H.264 encoder quality. This will have an impact on the RTSP stream. The storage space and bandwidth required will increase at higher settings.

5.2.3.4 Video / AGC

Define a zone in the image that the AGC will use for it's measurements.

The AGC (Automatic Gain Control) automatically matches video image exposure to the light circumstances. This option can be switched on or off at the -Video-Settings- menu.

Use the mouse to define a selection area in the image. Draw a frame in the video image and enlarge/reduce it by dragging the top left and bottom right corners. The red cross at the top removes the selection frame.

Make sure that you select the most important area in your image for the AGC function. This will usually be the location where the people will stand when they use the Robin.

5.2.3.5 Video / Overlay

Use the overlay option to display extra information over the video image. It will be displayed in the upper left corner of the image.

Overlay:

| | |
|---------------------------|--|
| ▪ Enable video overlay | Enable or disable the video overlay function |
| ▪ Show date and time | Display the date and time |
| ▪ Show device name | Display the device name (change the device name in -System-Device-) |
| ▪ Show device location | Display the location of the Robin (change the location in -System-Device-) |
| ▪ Additional overlay text | Display additional text |

5.2.3.6 Video / Motion

Motion allows you to select parts of the video image where you want to detect movement.

Detection of movement can trigger 'Actions' such as acoustic signals, switching a built-in relay or initiating a call to a telephone. The actions are set in -System-Events-.

Use the mouse to define a selection area in the image. Draw a frame in the video image and enlarge/reduce it by dragging the top left and bottom right corners. The red cross at the top removes the selection frame.

Consider how to minimise the chance of a false alarm when selecting the zones. For example, avoid objects that move in the wind such as flags, branches on trees, etc.

Both detection sensitivity and the size of the object you want to detect can be adjusted. The graph at the bottom of the image allows you to verify whether the settings are correct.

The colour of the bars is green (= no detection) or red (= detection)
The red line indicates the boundary of the detection area.

Motion detection:

| | |
|---------------|---|
| ▪ Enabled | Activates Motion detection |
| ▪ Sensitivity | Increases/reduces detection sensitivity |
| ▪ Object size | Changes the size of the object to detect by the Robin |

! Note: When the -Video-Motion- window for the Robin is open, no 'Events' that may have been set will be activated, not even if Motion detection is set to 'enabled'. !

5.2.4 Network

5.2.4.1 Network / Status

Network status shows the current network information.

Network status:

ROBIN Robin SmartView version dev-4467
Logged in as 'admin' (logout)

Telephony Audio Video **Network** System

Status Settings HTTP Mail NAT RTSP

Network status

These are the actual addresses currently assigned to the LAN interface

- Interface eth0
- MAC address 00:1d:02:43:7e:10
- IP Address 192.168.160.59
- Netmask 255.255.255.0
- Default gateway 192.168.160.1
- Primary nameserver 8.8.8.8
- Secondary nameserver 8.8.4.4
- Linkstate 100 Mbps full-duplex
- AutoIP Address 0.0.0.0

© Copyright 2009-2013 Robin Telecom

| | |
|-------------------------|---|
| ▪ Interface | Shows the network interface that is used |
| ▪ MAC address | Shows the Robins MAC address |
| ▪ IP address | Shows the IP address of the Robin |
| ▪ IP netmask | Shows the IP netmask |
| ▪ Default gateway | Shows the IP address for the default gateway |
| ▪ Primary nameserver | Shows the IP address for the primary DNS |
| ▪ Secondary name-server | Shows the IP address for the secondary DNS |
| ▪ Linkstate | Shows the speed and status of the Ethernet link |
| ▪ AutoIP address | Shows the fallback IP address |

5.2.4.2 Network / Settings

Allows you to change the network settings of the intercom.

ROBIN Robin SmartView
TELECOM DEVELOPMENT

Telephony Audio Video **Network** System

Status **Settings** HTTP Mail NAT RTSP

Configuration

Configuration method

Security

Enable 802.1x authentication ☐

Settings

IP Address 192.168.160.59

Netmask 255.255.255.0

Default gateway 192.168.160.1

© Copyright 2009-2013 Robin Telecom

Configuration:

| | |
|-------------------------|---|
| ▪ Configuration method | Select automatic (DHCP) or manual. |
| ▪ IP address | Enter the IP address for the Robin |
| ▪ Netmask | Enter the IP netmask |
| ▪ Default gateway | Enter the gateway or router address |
| ▪ Primary name server | Enter the IP address for the primary DNS (Domain Name Server) |
| ▪ Secondary name server | Enter the IP address for a secondary DNS (Domain Name Server) |

Security:

| | |
|--------------------------------|---|
| ▪ Enable 802.1x authentication | Enable 802.1x authentication |
| ▪ Status | Displays the 802.1x status |
| ▪ Authentication type | Select the type of authentication; MD5, PEAP, TLS |
| ▪ Identity | Enter your identity |
| ▪ Password | Enter your password |
| ▪ CA certificate | Select the CA certificate (PEAP and TLS only) |
| ▪ Supplicant certificate | Select the Supplicant certificate (TLS only) |

Settings:

| | |
|-------------------|--|
| ▪ IP address | Shows the IP address of the intercom |
| ▪ IP netmask | Shows the standard IP netmask |
| ▪ Default gateway | Shows the IP address for the default gateway |

5.2.4.3 Network / HTTP

Proxy:

! Note: This is the Proxy server for HTTP traffic, not the Proxy server for the SIP connection to the PBX !

| | |
|------------------------|--|
| ▪ Enable HTTP proxy | Activates the use of an HTTP proxy server |
| ▪ Proxy server address | Enter the address or hostname for the proxy server |
| ▪ Proxy server port | The IP port used by the proxy server for communication |

Settings:

| | |
|---------------|---|
| ▪ HTTP port | Set the IP port for HTTP communication. (default value is 80) |
| ▪ HTTPS port | Set the IP port for HTTPS communication. (default value is 443) |
| ▪ Certificate | Optional - Select a certificate for the HTTPS connection |

5.2.4.4 Network / Mail

Configure the e-mail settings for the Robin.

Server settings:

The green '+' creates a new line.

The '>>' behind a line opens the details for this line.

The red X behind a line deletes the line from the list.

| | |
|----------------|--|
| ▪ From address | Set the from e-mail address of the Robin |
| ▪ Mail server | Enter the e-mail server address or hostname |
| ▪ Encryption | Select a encryption method (none, SSL, TLS) |
| ▪ Auth | Select this option if mail server authentication is required |
| ▪ Submission | Select this option if the mail server uses the 'Submission' protocol |

Address book:

The green '+' creates a new line.

The '>>' behind a line opens the details for this line.

The red X behind a line deletes the line from the list.

| | |
|-----------|--|
| ▪ Name | The name that is associated with this e-mail address |
| ▪ Address | The e-mail address |

Mail server test:

Tests the connection with the configured e-mail server.

| | |
|--------------------|--|
| ▪ To | Enter a recipient address for the test email message |
| ▪ Test SMTP server | Initiates the test email message |
| ▪ SMTP test result | Shows the test result |

5.2.4.5 Network / NAT

Depending on the network configuration, you may need to provide NAT data.

Settings:

| | |
|--------------------------------------|---|
| ▪ NAT hostname | Enter the NAT address or the hostname |
| ▪ NAT port | Enter the IP port for NAT |
| ▪ Use STUN for NAT address discovery | Activate this option if a STUN server is used |
| ▪ Stun server | Enter the IP address or hostname for the STUN server |
| ▪ Stun port | The IP port used by the STUN server for communication |
| ▪ Stun status | Shows the status of the STUN server |

5.2.4.6 Network / RTSP

The Robin is able to stream the video and audio through RTSP. Most video management software (VMS) solutions use the RTSP standard *. The Robin uses H.264 for video and G.711 uLaw for audio.

! Note: The Robin uses the RTP over RTSP (TCP) standard. Not every VMS solution supports audio over RTSP. !

The screenshot shows the 'Robin SmartView' web interface. At the top, there's a navigation bar with tabs: Telephony, Audio, Video, Network, and System. Below this is a sub-menu with Status, Settings, HTTP, Mail, NAT, and RTSP. The 'Settings' tab is active, and the 'RTSP' sub-tab is selected. The settings are organized into a list with checkboxes and input fields:

- ☒ Enable RTSP server
- ☒ RTSP port: 554
- ☒ Require authentication
- Username: admin
- Password: *****
- ☐ Allow Multicast
- ☒ Enable keep alive
- Keep Alive Timeout: 120 seconds
- RTSP DSCP Class: CS3
- Audio RTP DSCP Class: EF
- Video RTP DSCP Class: AF41

At the bottom left of the settings area is an 'Apply settings' button. At the bottom center, there is a copyright notice: '© Copyright 2009-2013 Robin Telecom'.

For more information regarding RTSP support of the Robin in combination with VMS solutions see the document: How-To_RTSP_ENG.pdf on the supplied USB drive. You can also download this document on our support-site: <http://support.robin.nl>

Settings:

| | |
|--------------------------|---|
| ▪ Enable RTSP server | Enable RTSP support |
| ▪ RTSP port | Change the RTSP port (default 554) |
| ▪ Require authentication | Use RTSP authentication |
| ▪ Username | RTSP username |
| ▪ Password | RTSP password |
| ▪ Allow Multicast | Enable Multicast * |
| ▪ Multicast address | Set the multicast address |
| ▪ Enable keep alive | Enable RTSP 'keep alive' |
| ▪ Keep Alive Timeout | Set the keep alive timeout |
| <hr/> | |
| <i>DSCP class</i> | <i>The DSCP class is used for Quality of Service.</i> |
| ▪ RTSP DSCP Class | Select the DSCP class for all SIP traffic |
| ▪ Audio RTP DSCP Class | Select the DSCP class for RTP audio |
| ▪ Video RTP DSCP Class | Select the DSCP class for RTP video |
| <hr/> | |

*** Multicast will reduce the load on the network and the intercom. ! Note: Not every video application supports multicast. !**

5.2.5 System

5.2.5.1 System / Device

Info:

| | |
|-------------------|--------------------------|
| ▪ Product | Product type |
| ▪ Serial number | Serial number |
| ▪ Version | Software version |
| ▪ Revision number | Software revision number |

Identity:

| | |
|---------------|--|
| ▪ Device name | The name entered here is passed to the SIP protocol. This means that the name is visible, for example when a telephone has a caller ID display |
| ▪ Location | You can enter the location of the Robin here, e.g. the main entrance, loading door, barrier, etc. |
| ▪ Contact | Enter the details of the person responsible for managing the Robin |

Language:

| | |
|------------|--|
| ▪ Language | Select the language of the web interface |
|------------|--|

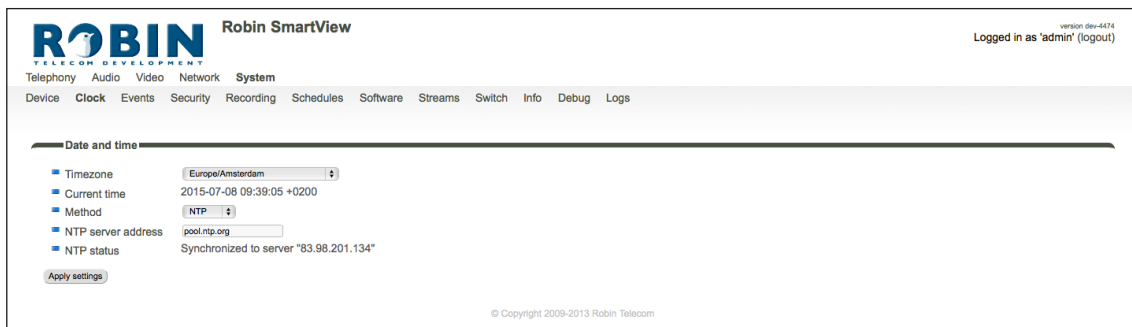

Button *:

- | | |
|----------------------|--|
| ▪ Button sensitivity | Modify the sensitivity of the buton(s) * |
|----------------------|--|

* **Not available on every Robin. !**

5.2.5.2 System / Clock

You can change all the date and time related settings for the Robin here.

Date and time:

| | |
|----------------------|---|
| ▪ Timezone | Select the right time zone |
| ▪ Current time | Shows the current date and time settings |
| ▪ Method | Allows you to choose between manual or automatic (NTP) time setting |
| ▪ NTP server address | Enter the address or name of the time server here. |
| ▪ NTP status | Shows the status of the selected time server |
| ▪ Set time | Enter the date and time here (manual setting) |

! Note: The Robin does not have a build-in backup battery. Every time the Robin reboots both the date and time need to be set. By default it will use an NTP server to set the date and time. In case of a 'manual' setting, this has to be done by hand after every reboot. We strongly recommend the use of an NTP server.!

5.2.5.3 System / Events

The Robin is equipped with various options for initiating actions. For example, starting an outgoing telephone call to a predefined number, the sending of an e-mail containing a photo of the person using the intercom, the playback of an audio message etc.

These actions are started by an Event (source). An event source may be movement in front of the camera, a loud noise that exceeds a predefined volume or a push on the button of the intercom. You can define the various events sources here and set the response actions that take place when an event occurs.

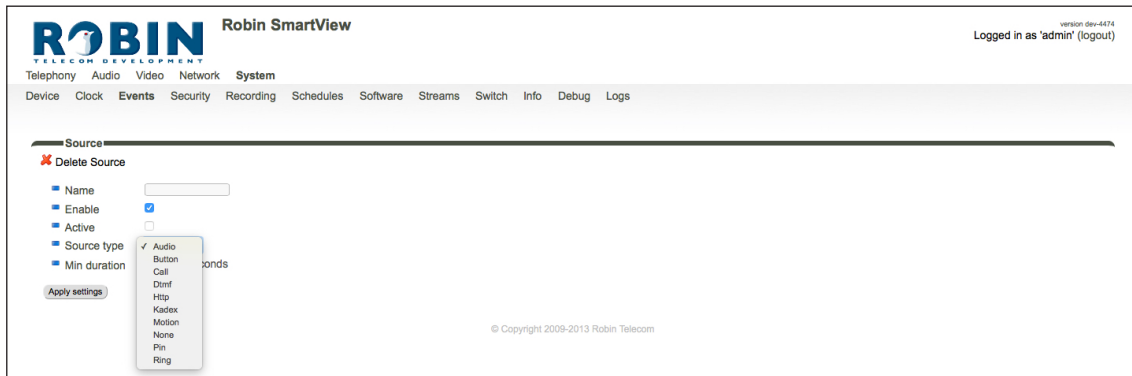

You can make event actions time bound with the help of the 'Schedule' mechanism of the Robin. That way an action can only start within a time slot, eg. lunch or after work hours. Definition of the schedules can be done in the menu -System-Schedules-.

Sources

Define the events. Choose from:

- Audio - Triggers if audio is detected (VOX detection) - See menu -Audio-Detection-
- Button - Triggers when a button is pushed or a preset is chosen on the Keypad - (Choice: button 1, 2, 3, 4, 5, 6 or Keypad)
- Call - Triggers when a call is set up - (Choice: incoming or outgoing)
- Dtmf - Triggers when a combination of two keys are pressed during a phone call, starting with a '*' followed by '0-9' (Eg. *1, *7 etc.) - (Choice: 0-9, # or *)
- Http - Triggers if a http call is detected (default `http://<IP-ADDRESS-ROBIN>/evmgr/emit`). The 'emit' part in the URL is variable and can be changed in every other word. Change this in the field: 'HTTP path'
- Kadex - Triggers when a signal is detected coming from a Kadex home automation server. The Kadex event on which it needs to trigger can be set in the field: 'Event name'. As soon as this Event is set, the sub-menu 'Kadex' will be visible. Use this to fill-in the Kadex server details.
- Motion - Triggers when motion is detected by the camera - See menu -Video-Motion-
- Pin - Triggers when a correct PIN code is detected (only available on the Robin SV Keypad) - See menu -Telephony-Phonebook-, Presets
- Ring - Triggers when a 'ring' is detected (incoming or outgoing)

The green '+' creates a new 'Event'.

The '>>' behind a line opens the details for this 'Event'.

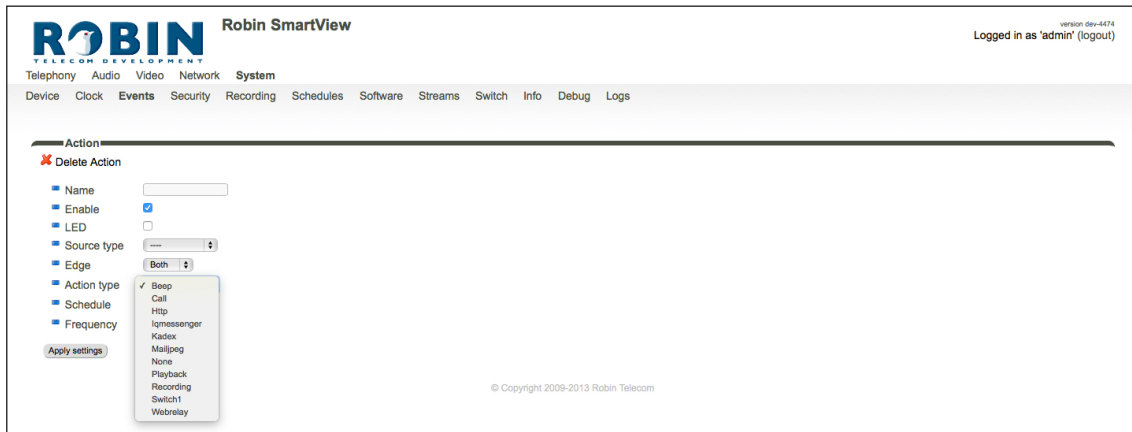

The red X behind a line deletes the 'Event' from the list.

| | |
|-----------------|--|
| ▪ Name | The name that is associated with this event source |
| ▪ Enable | Enable this event source |
| ▪ Active | Shows whether an event source is active |
| ▪ Type | Selects the type of event source |
| ▪ Min duration` | Set the event source minimum duration |

Actions:

Define the 'Actions'. Choose from:

- Beep - Starts playing a beep through the intercom - (Choice: frequency of the beep)
- Call - Start a phone call to the default phone number(s) - (Choice: *Allow hangup* (on/off): When on, a repeated source input also disconnects the call)
- Http - Emits a http command. - (*two URLs*: one if the source becomes active and one if the source becomes inactive)
- Iqmessenger - Emits a URL to the IQ Messenger system - (*One URL*: URL of the used IQMessenger system)
- Kadex - Emits an event to a Kadex home automation server. - (*Kadex event*: Name of the in the Kadex defined event). As soon as this Action is set, the sub-menu 'Kadex' will be visible. Use this to fill-in the Kadex server details.
- Mailjpeg - Send an e-mail containing a photo of the person using the intercom to a predefined e-mail address - For the Robin KP, see menu -Telephony-Phonebook- Presets, for the Robin with 1,2,4 or 6 buttons, see menu -Telephony-Call settings- Call priority.
- Playback - Plays an audio file - (*Mediafile*: choose a file, *Playback loop*: play once or play in a loop) - See menu -Audio-Media-
- Recording - Start a local video recording *
- Switch1 - Switch the internal relay switch in the Robin SV
- Webrelay - Switch a relay switch on an external relay unit from ContolByWeb; WEBRelay (*Address*: the IP adres of the WEBRelay - *Relay (1-4)*: the relay to switch - *Action (on/off/pulse)*: on, off or pulse the relay switch (user selectable pulse time) - *Use authentication*: when a password is demanded to switch the WEBRelay) **

The green '+' creates a new 'Action'.

The '>>' behind a line opens the details for this 'Action'.

The red X behind a line deletes the 'Action' from the list.

| | |
|---------------|--|
| ▪ Name | The name that is associated with this event action |
| ▪ Enable | Enable the event action |
| ▪ LED | Not used |
| ▪ Source type | Selects the event source for which this event action is the response |
| ▪ Edge | Start the event action at the beginning of the event source, the ending of the event source or on both (rising / falling / both) |
| ▪ Action type | Selects the type of 'Action'. |
| ▪ Schedule | Select a defined schedule |

*** : The recording of video on the internal SD card is only possible if the 'Recording' feature is enabled. See menu -System-Recording-. Note: The recordings are not directly available for playback! An API is available to play back the recordings. This API can be used for development of an App to make the recordings available for playback. See the "How-To_Remote_Control" PDF on the supplied USB stick or on the support website: support.robin.nl.**

**** : For more information about the Robin / WEBRelay, see Tech-Note: "How-To_Robin_and_WEBRelay" PDF on the supplied USB stick or on the support website: support.robin.nl !**

5.2.5.4 System / Security

Authentication:

| | |
|--|---|
| <ul style="list-style-type: none"> Require Authentication | Disable secure access to the web interface (not recommended) |
| <ul style="list-style-type: none"> Admin username | The Administrator username. (admin) |
| <ul style="list-style-type: none"> Admin password | Change the default password of the Administrator (123qwe) |
| <ul style="list-style-type: none"> User username | The User username. (user) |
| <ul style="list-style-type: none"> User password | Change the default password of the User (123qwe) |
| <ul style="list-style-type: none"> User account locked | When enabled, the User can only login during a period of one hour after a call is made by the intercom. The rest of the time logging in as a User is not possible |
| <ul style="list-style-type: none"> User can control door opener | Displays three buttons below the Live video frame (menu -Video-Live-) to control the built-in relay switch |

! Note: As soon as you activate the 'Require Authentication' check box, enter a user name and password and click the 'Apply settings' button, the web interface will demand a log-in name and password !

Certificates:

The green '+' creates a new line.

The '>>' behind a line opens the details for this line.

The red X behind a line deletes the line from the list.

| | |
|--------------------|---|
| ▪ Common name | This is the name of the certificate. |
| ▪ Certificate | Upload a certificate from the PC to the Robin. |
| ▪ Certificate info | Shows detailed information about the certificate. |

5.2.5.5 System / Recording

The Robin is able to record video on the internal SD card. Select the option 'Recording' to activate it.

! Note: The recordings are not directly available for playback! An API is available to play back the recordings. This API can be used for development of an App to make the recordings available for playback. See the "How-To_Remote_Control_ENG" PDF on the supplied USB stick or on the support website: support.robin.nl. !

5.2.5.6 System / Schedules

The Robin has multiple functions that can be made time bound. Use this schedule menu to create timeslots: e.g. office hours, lunch break, etc. Consequently, during the lunch break for example, the Robin can be set to dial a different telephone number from that configured for normal working hours.

The timeslots are not prioritised so they must be set consecutively, e.g.:

8:30-12:29 morning -> call reception

12:30-13:00 lunch -> call a mobile phone

13:01-17:00 afternoon -> call reception

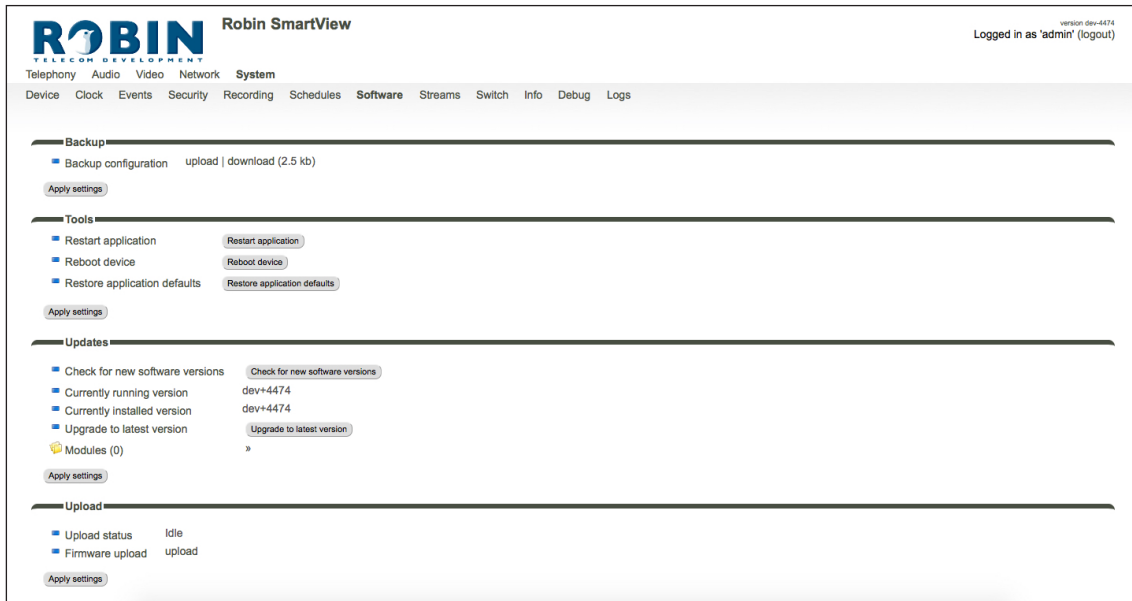

| | |
|---------------|--|
| ▪ Description | The name that is associated with this Schedule |
| ▪ Day | Select the day / days for this schedule |
| ▪ From | Start time |
| ▪ To | End time |

5.2.5.7 System / Software

New software versions for the Robin are released regularly. These versions include improvements and occasionally also introduce new functions.

Updating is a two-stage process; the first step is to check whether new software is available. If so, you can initiate the upgrade to the latest version.

After the upgrade, the Robin has to reboot.

Backup:

- | | |
|--|---|
| <ul style="list-style-type: none"> Backup configuration | <p>You can make a backup of the settings using the 'Download' button. A file called 'Backupsettings.txt' is downloaded to the PC</p> <p>You can restore a backup to the Robin using the 'Upload' button. First, you select a backup file that was created earlier. After restoring the backup, the Robin must be rebooted</p> |
|--|---|

Tools:

| | |
|--------------------------------|--|
| ▪ Restart Robin application | Starts the Robin software up again. This is faster than rebooting the device |
| ▪ Reboot device | Reboots the complete device. It may take 30 seconds before the Robin is active again |
| ▪ Restore application defaults | Restores the default settings for the Robin |

Updates:

| | |
|-----------------------------------|---|
| ▪ Check for new software versions | Checks whether new software is available |
| ▪ Currently running version | Shows the current software version |
| ▪ Currently installed version | Shows the software version that has already been installed |
| ▪ Upgrade to latest version | Downloads the latest version of the software and installs it on the Robin |

! Note: Internet access for the Robin is necessary to update the software of the Robin. !

5.2.5.8 System / Streams

The 'Streams' menu shows all active video streams.

! Note: Not more than 3 simultaneous video streams are recommended. If more streams are active, functioning of the intercom might become disturbed. !

5.2.5.9 System / Switch

The Robin has a built-in voltage free relay contact. This can be used to open a door or a gate. When a connection has been established between the Robin and a telephone handset, the relay switch can be operated via key combinations on the telephone.

For examples on how to connect the Robin to an electronic door lock, see: ***‘Appendix B, Electronic lock’***.

Control:

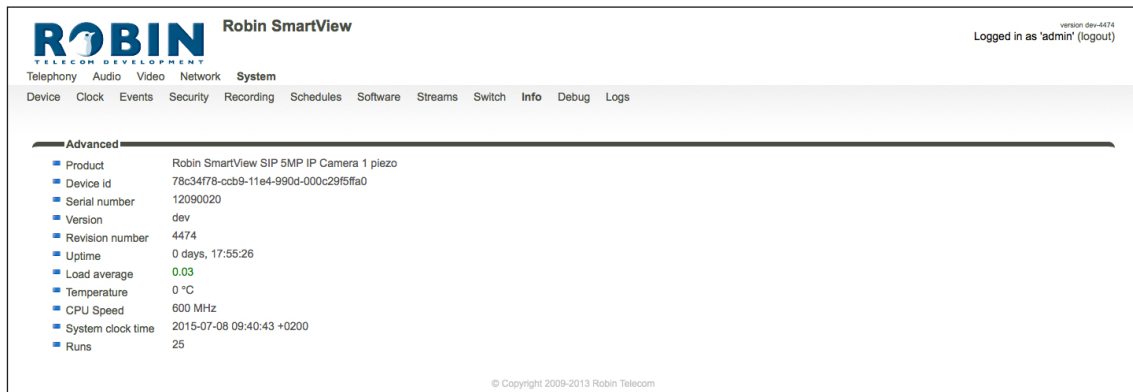

| | |
|---------|--|
| ▪ State | Displays the status of the relay switch (open / close) |
| ▪ Close | Deactivate the switch |
| ▪ Open | Activate the switch |
| ▪ Pulse | Activate and automatically deactivate the switch after a predefined time |

| | |
|-------------------------------|--|
| | For the actions: to open, to keep open and to close the keys 0.....9, * and # can be used |
| ▪ To open | The relay switch opens and closes again after a set time (Pulse time). The default key combination for this is ' ##' |
| ▪ To keep open | The relay switch stays open, independently of the set time |
| ▪ To close | The relay switch closes |
| ▪ Pulse time | You can set the time that the relay switch stays open here. (duration min 1 second and max 30 seconds) |
| ▪ Play sound | Plays a tune when the relay switch is active |
| ▪ Hangup after opening | Breaks the connection after activating the relay switch |
| ▪ Close door after hanging up | Close the relay switch after the phone is disconnected |
| ▪ Label for 'pulse' action | Change the display name for 'Pulse' |
| ▪ Label for 'on' action | Change the display name for 'On' |
| ▪ Label for 'off' action | Change the display name for 'Off' |

! Note: The labels 'Pulse', 'On' en 'Off' will be visible under the live video image (-Video-Live-). The option 'User can control door opener' needs to be enabled (-System-Security-). !

5.2.5.10 System / Info

Info displays detailed information about the Robin.

Advanced:

| | |
|---------------------|---|
| ▪ Product | Shows the product type |
| ▪ Device | Shows the device ID |
| ▪ Serial number | Shows the serial number |
| ▪ Version | Shows the software version |
| ▪ Revision number | Shows the software revision number |
| ▪ Uptime | Shows the time that the Robin is switched on |
| ▪ Load average | Shows the average processor load (UNIX style) |
| ▪ Temperature | Shows the temperature in the Robin |
| ▪ CPU speed | Shows the current processor speed |
| ▪ System clock time | Shows the system time |
| ▪ Runs | Shows the amount of runs |

5.2.5.11 System / Debug

The Robin features a built-in 'Debug' function. This allows you to create a 'Network trace' of all the network traffic to and from the Robin. This tool allows fast and effective resolution of problems with the Robin.

The 'Go to Robin' function enables remote support to the unit. It connects the unit to Robin Telecom Development and can be used for remote support.

! Note: Go to Robin will only work after contacting the support department of Robin Telecom Development. !

6 Support

For details of special settings, requests for support and FAQs, please use our 'online' support page:
<http://support.robin.nl>

Appendix A, List of key words

Default setting:

Standard programme setting.

DHCP:

‘Dynamic Host Configuration Protocol’.

Computer protocol that describes how a computer can obtain its network settings from a DHCP server.

DNS:

‘Dynamic Name System’.

Protocol for managing domain names and IP addresses on the Internet.

DNS server:

This is the system that compares all the domain names and IP addresses in a database with each other and links them with the aid of a DNS server.

End-to-end:

The ‘end-to-end’ principle is one of the core principles of the Internet and is reflected in the design of the underlying methods and protocols of the ‘Internet Protocol Suite.’

The principle is based on definition of the communication protocol actions in such a way that they take place at the ‘end points’ of a communication system, or as close as possible to the source that is to be verified.

Gateway:

A ‘gateway’ is a network point that acts as a “door” to a network other than the local network.

GUI:

‘Graphical User Interface’.

The graphical user environment is a tool for interacting with a computer that uses graphical images and text.

HTTP:

‘Hypertext Transfer Protocol’.

http is the protocol for communication between a web client (generally a web browser) and a web server. This protocol is not just commonly used on the World Wide Web, it is also used in local networks (which we call an intranet).

IP:

‘Internet Protocol’.

This is the part of the system that is used to allow computer networks to communicate with each other via other networks, such as the Internet.

LAN:

‘Local area network’.

Local area network of two or more computers that are connected with each other, either directly or via a shared medium.

MAC (address):

‘Media Access Control’.

The MAC address is a unique identification number that is allocated to a device in an Ethernet network.

Hardware address is another name for the MAC address. It ensure that the devices in an Ethernet network can communicate with each other.

Midspan (PoE):

A Midspan (PoE) is a device that injects power over a standard Ethernet connection.

NAT:

‘Network Address Translation’.

Network Address Translation, for which the terms Network masquerading or IP-masquerading are also used, is the translation of IP addresses and often also TCP/UDP port numbers from one separated range to another. Often used to allow multiple users of a home network to access internet via a single IP address.

Netmask:

Binary number that is used to create a subnet.

NTP:

‘Network Time Protocol’.

A protocol that is used by the time server.

PBX:

‘Private Branch Exchange’.

Abbreviation used for a business telephone exchange for private use.

PoE:

Power over Ethernet.

A system for delivering power and data via an Ethernet network.

Proxy server:

A proxy server is one that is located between a user’s computer and the computer where the information the user wants is stored.

SIP:

‘Session Initiation Protocol’.

A protocol that makes multimedia communication (audio, video and other data communication) possible and used among other things for the Voice over Internet Protocol (VoIP).

STUN:

‘Session Traversal Utilities for NAT’.

‘STUN’ is a protocol or tool that is used when applying NAT.

Time server:

A ‘time server’ is a network computer, which reads the time from a clock that has been allocated to it and transfers this information to other computers that use the same network.

VoIP:

‘Voice over Internet Protocol’.

A protocol that uses the Internet or another IP network to transport speech.

Web GUI:

A web browser-supported graphical user environment (see also GUI).

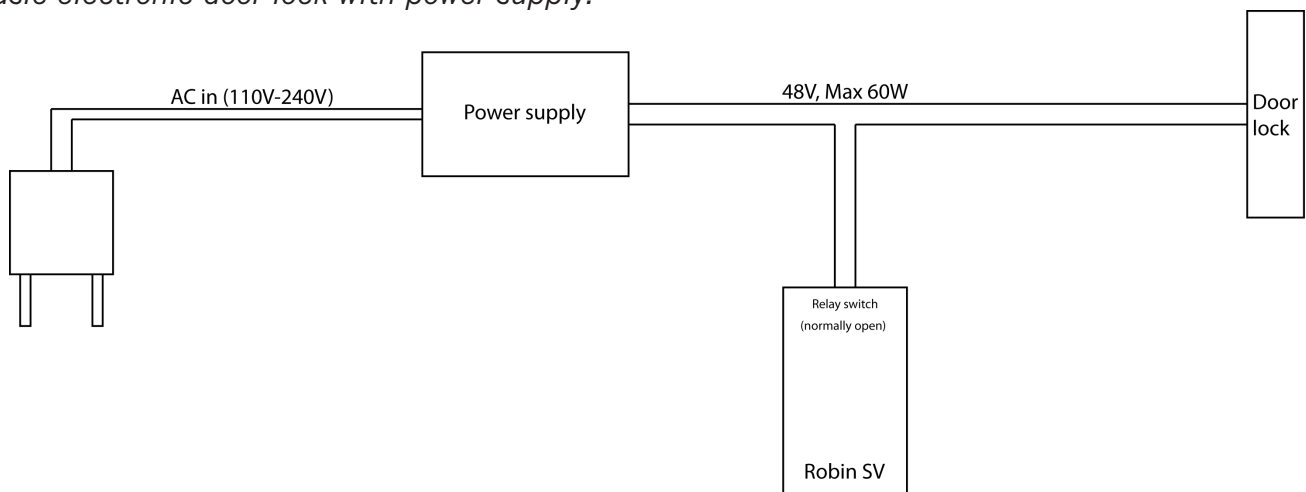

Appendix B, Electronic lock

The Robin has a built-in voltage-free relay contact. The Robin is not able to power a electronic lock, a power supply is required.

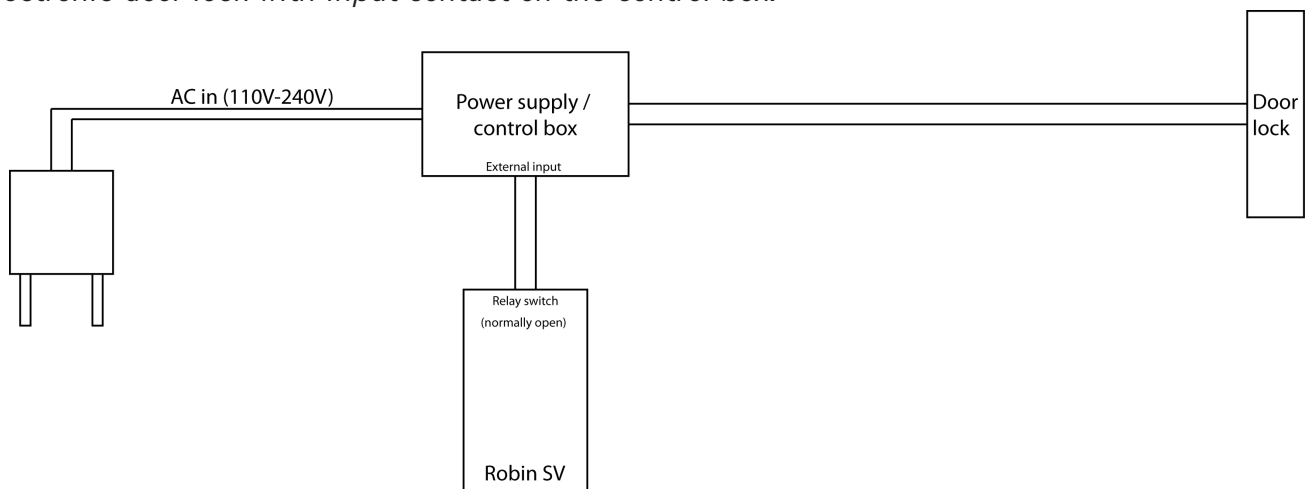

There are many different electronic locks on the market. We advise to use the prescribed method of the electronic lock manufacturer to connect the Robin.

This Appendix shows two common ways to connect the Robin to the electronic door lock. That doesn't mean that these two options are the only options possible!

Basic electronic door lock with power supply:

Electronic door lock with input contact on the control box:

! Note: The relay switch of the Robin doesn't supply power for the electronic lock! Make sure that the switched voltage does not exceed 48V and the switched power is max. 12W. !
