

User Manual

ProLine SIP Compact SIP ProLine SV SIP ProLine SIP Compact Classic SV SIP Compact SV SIP

Software version 3.6.10 or higher

Manual version: 3.2.9 Date: 29-04-2020

About this manual

This manual describes the installation and programming of the Robin SIP intercoms in combination with software version 3.6.10. You can update the software of the Robin to the latest version. For instructions on updating see page 63 of this manual.

This manual applies to:

Robin ProLine SIP (1, 2, 4 buttons or keypad) Robin Compact SIP Robin ProLine SV SIP (1, 2, 4 buttons or keypad) Robin ProLine SIP Compact Robin Classic SV SIP (1, 2, 4 buttons) Robin Compact SV SIP

If you have any questions after reading this manual, please contact us at:

website: www.robintele.com support website: support.robintele.com e-mail: info@robin.nl phone: + 31 72 534 64 26

Important safety information

Take the following security measures when using a Robin:

- The use of port forwarding in routers / firewalls to access the Robin door phones is strongly discouraged. Use the Robin door phones on the local network (LAN) only
- Change at first use the passwords of both the 'admin' and the 'user' (in the menu -System-Security-), it is recommended to change them regularly
- Use strong passwords (minimum 12 characters long)
- Configure the used PBX / VoIP provider to only allow the Robin door phone to call its programmed destination numbers using the white-list function in the PBX / VoIP provider
- Update the Robin door phone regularly

1 Introduction

1.1 Robin SmartView / ProLine SIP Door Intercom

Integrated functions

The Robin SIP models have many integrated functions in one single device:

- Telephone device with one piezo push-button
- SIP support for audio
- Door opener
- Advanced event mechanism
- Extended API (Application Programming Interface)

The Robin SV SIP models have the same features as the Robin SIP but extends its feature set with:

- SIP support for audio and video
- High-Definition, full colour camera with a wide-angle lens
- Security camera with movement- and audio detection
- RTSP streaming (audio and video)

The Robin ProLine and Classic models are equipped with the same features as the Robin SV SIP models but extends its feature set with:

- Premium design
- Backlit button(s) for more convenience during night time use
- Engravable illuminating labels
- Recessed screws
- Modified GUI-layout
- ProLine and Classic Equipped with one, two, four buttons (Keypad available on ProLine)
- ProLine SIP Compact Compact form factor, no visable screws
- Classic SV SIP Brass housing

1.2 Robin features

Easy to install

A single module is all that has to be mounted; there are no extra modules necessary.

Simple operation

The Robin devices with 1, 2 or 4 buttons can dial predefined phone extensions. The door opener relay is activated via the device to which the call is directed. On the Robin devices with a keypad, the call is set up by typing a preset number on the keypad. It also features a PIN code feature that can be used to unlock the door. All Robin intercoms with an integrated camera are capable of sending e-mails containing a photograph of the person using the intercom to predefined recipients.

SIP communication

The Robin uses the Session Initiation Protocol (SIP). This means that the intercom can be connected to any IP-PBX or VoIP provider that supports the SIP protocol.

Microsoft Teams support

Software version 3.6.10 adds the option to connect to a Microsoft Teams environment using the CyberGate service of CyberTwice. CyberGate offers audio and video support. Calls made with a Robin that has an intergrated camera will be directed to a Microsoft Teams user that can cummunicate, see the person at the door and open the door remotely. For more information about CyberGate, see the website cybertwice.com

Door opener

The potential free (dry contact) relay switch embedded in the Robin is activated by typing in a key combination at the dialled device. The key combination can be specified in the WEB-GUI of the Robin. The relay can be used to open a door, a gate or a barrier.

Video support (Robin devices with integrated camera)

A real-time video image of the person using the Robin is displayed on the screen of the H.264 compatible videophone or softphone as soon as a call is answered.

! Note: When using an IP-PBX or VoIP provider, check the distributor of the IP-PBX or the VoIP provider for H.264 video compatibility. *!*

Introduction

High-Definition video quality (Robin devices with integrated camera)

The integrated camera of the Robin is capable of displaying the video image in High-Definition. The image can be set to an aspect ratio of 4x3 or 16x9. A maximum of three simultaneous video streams is supported.

High-quality sound reproduction

Thanks to the advanced audio DSP in the Robin, it's sound quality is exceptionally good without any echo or interference.

Security camera function (Robin devices with integrated camera)

The integrated camera can also be used for surveillance purposes. The Robin is able to deliver the video stream to many Video Management Software systems (VMS) in two formats, MJPEG and H.264 (RTSP). It is also capable of capturing the person using the camera and sending e-mails with that photo to predefined recipients.

Picture To Email (Robin devices with integrated camera)

All Robin devices with integrated camera are equipped with the Picture To Email feature. It will send an e-mail with a photo of the visitor to an (per button or preset configurable) email address of choice. The document: How-To_Picture2Email_ENG.pdf on the provided USB drive describes the configuration of this function. You can also download this document on our support site: http:// support.robintele.com

No separate power supply

The Robin is powered via Power over Ethernet (PoE IEEE 802.3af). This eliminates the need for a separate power supply; connection to a PoE network switch or Midspan is all that is necessary.

Web-based configuration

The Robin can be configured on a PC or Mac via a web browser (e.g. Firefox, Chrome, Safari). Using a web browser, modification of all the settings for the Robin is easy, regardless of the physical location of the Robin.

In addition to configuring and programming the Robin via the web browser, it also offers the option of viewing any activity in the vicinity of the Robin in real time with the integrated camera.

Compatible with WEBRelay

The Robin is compatible with an external IP relays, the ControlByWeb WEBRelay Quad-LS. This external device is equipped with 4 build-in relays and can be connected to the LAN. The 'Events' mechanism in the Robin can control the four relays (page. 56).

2 Operation

2.1 Operating the door phone

2.1.1 Robin with one or more buttons

To ring the door phone, press on the bell-sign on the Robin. The unit will play a ringing sound and the defined telephone set will be called. The Robin ProLine and Classic models will also blink the label illumination when the button is pressed.

2.1.2 Robin with keypad

The Robin with keypad has 16 keys.

- Keys 1, 2, 3, 4, 5, 6, 7, 8, 9 and 0, use these keys to type the desired preset
- Green call button, start calling the just entered preset
- Red disconnect button, disconnect the call
- The 'i'-key, call a programmed preset
- The 'C'-key, clear the input
- The '*'- and '#'-key, used for entering a PIN code

The Robin with keypad offers you the ability to create a call list. This call list contains presets (for example apartment numbers) to which you can assign up to three phone numbers, an e-mail address (optional) and a PIN code (optional). By dialing the preset number on the intercom it will start calling phone number one. If the first number is engaged or not answering it will continue wit the second number. If the second number is engaged or not answering it will continue wit the third number. It also features a 'i-button' on the Keypad. This button can be programmed to dial a defined preset, for instance the reception or building manager.

If the green call button is pushed without dialing a preset first, the preset programmed for the 'i'-key will be dialed.

Keypad specific settings such as beep volume, -frequency or backlight settings can be changed in the menu -Telephony-Call settings-General-.

2.2 Answering

You answer a call initiated by the Robin by answering the phone that is being called. In case you use a H.264 compatible videophone or softphone, the video picture of the integrated camera is displayed on the screen of the phone.

2.3 Controlling the built-in door opener

The built-in door opener is controlled with predefined keys on the telephone set that answers the call. When you activate the door opener, the attached door, gate, barrier, etc. will open.

You can change the default code to open the door in the interface of the Robin in the menu -System-Switch- (default code: ##).

2.4 Access using a PIN code (Robin with keypad only)

The Robin with keypad can activate the door opener by entering a PIN code on the Keypad. This PIN code is preset depended, so every preset can have its own PIN code. When the correct PIN code is entered, the intercom can activate the build-in relay switch or an external relay switch using the 'Events' mechanism.

To enter a PIN code on the intercom, start by pressing the '*'-key and end it by pressing the '#'-key. Assuming the PIN code is 123456 you will need to enter: *123456# to unlock the door. When a valid PIN code is entered a tune will be played by the intercom and the build-in relay switch will be activated.

3 Installation

3.1 Package contents

- The Robin
- USB stick containing the manuals and the 'Robin Discovery Utility' software
- Anti-theft Allen key
- 4 anti-theft screws
- 4 wall plugs (6mm)
- Drilling template
- Tie-wrap

3.2 Installation dimensions Robin Compact SV / SIP

The installation dimensions of the Robin SV / SIP differ from the dimensions of the Robin ProLine SIP models.

The dimensions of the surface-mount box are:

•	1 button - C01100	88 (B) x (47 (D) x 162 (H)
---	-------------------	----------------------------

3.3 Installation dimensions Robin ProLine / Robin Classic

The dimensions of the Robin ProLine and Classic are identical for all versions. The 1, 2, 4 button and the Robin with Keypad all use the same size of surface- and flush mount boxes.

The dimensions of the flush mount box and surface mount box are:

• 1, 2, 4 button flush mount box - C01112	88 (B) x 47 (D) x 239 (H)
 1,2,4 button surface mount box - C03001 	115 (B) x 45 (D) x 261 (H)

3.4 Tools and materials required for mounting without the flush mount box or surface mount box

The following tools and materials are required when mounting the Robin:

- Core drill, 90 mm in diameter
- Masonry drill, 6 mm in diameter
- Stone chisel
- General set of tools
- Anti-theft Allen key (supplied)
- Anti-theft screws (supplied)
- 6mm wall plugs (supplied)
- Drilling template (supplied)
- Tie wrap (supplied)

3.5 Mounting instructions for mounting without the flush mount box or surface mount box

Follow the step-by-step plan described below for problem-free mounting of the Robin.

Step-by-step plan:

- 1. Drill holes of 90 mm in diameter and 60 mm in depth using the core drill. Use the drilling template supplied in the package for this.
- 2. Remove the cores from the drilling using the stone chisel. Shape the hole so that the plastic housing of the Robin fits with room to spare.
- 3. Feed the cable into the hole, leave enough excess length for a loop in the hole.
- 4. Drill the four fixing holes for the front panel using the drilling template and insert the wall plugs supplied with the set into the holes.
- 5. Connect the Ethernet cable to the clamp connector. (Chapter 3.9)
- 6. Optional connect the cable for operating the door switch to the clamp connector.
- 7. Secure the cable to the plastic housing using a tie-wrap.
- 8. Position the Robin in the hole in such a way that the looped cable fits neatly behind the device.
- 9. Fix the device securely in place using the anti-theft screws supplied in the package.

3.6 Installation dimensions Robin ProLine SIP Compact

See the drawing for the dimensions of the Robin ProLine SIP Compact. It ships with a surface mount box.

3.7 Tools and materials required for mounting the Robin ProLine SIP Compact

The following tools and materials are required when mounting the Robin:

- Masonry or wood drill
- General set of tools
- Allen key (supplied)
- Screw (supplied)
- Tie wrap (supplied)

3.8 Mounting instructions

Follow the step-by-step plan described below for problem-free mounting of the Robin ProLine SIP Compact.

Step-by-step plan:

- 1. Keep the surface-mounting box in the right place on the wall and make sure it is level.
- 2. Mark the four mounting holes on the wall with a pencil.
- 3. Also mark the point where to make the hole for the doorbell cables.
- 4. Drill the holes.
- 5. Feed the ethernet cable and optionally the relais cables through the drilled hole.
- 6. Screw the surface-mounting box to the wall.
- 7. Connect the unit.
- 8. Place the unit at an angle in the mounting box. Secure the doorbell with the screw and Allen key supplied

14

15

3.9 Connecting the Robin

Connecting the Robin

To connect the Robin, use an Ethernet cable, type CAT5(e) or CAT6. The colours of the individual wires match the colour codes below the connector.

To connect to the built-in relay switch, use a second cable.

Colour codes

• OR / W	Orange / white
• OR	Orange
• GR / W	Green / white
• BL	Blue
• BL/W	Blue / white
• GR	Green
 BR / W 	Brown / white
 BR 	Brown
 REL_NO 	Relays connection, 'Normally open'
REL_CC	Relays connection, 'Common'

4 System installation

4.1 Requirements prior to installation

- Network connection with PoE (Power over Ethernet) is used to power the Robin; the power supply must be 802.3af compatible).
- PC with web browser.
- The following web browsers are supported:
 - FireFox
 - Safari
 - Google Chrome
- USB stick containing the 'Robin Discovery Utility' software and manuals (supplied)
- Network with or without DHCP support (DHCP support is recommended)
- Network cable
- Optional Two-core cable for door switch operation

4.2 Connecting the Robin to a network

Connect the Robin to the network via the network connection socket on the rear. The Robin will boot automatically. This can take up to 60 seconds.

! Note: The length of the Ethernet cable may not exceed 100 metres. This is a limit of the Ethernet standard. *!*

S

Windows users:

Copy the 'Robin Discovery Utility' software to a PC that is connected to the network. Start the 'Robin Discovery Utility' software and click the "Play" button. The software will scan for Robin devices in the network. When a Robin is detected, it is displayed in the list. Double-click on the Robin you would like to configure; the web interface for the selected Robin will show.

7 Robin Discovery Utility		
Server Help		
▶ 2		
Device name	IP address	Host ID

Mac / Linux users:

Enter the IP address of the Robin in the address bar of the web browser that is installed on your PC in order to access the web interface.

The Robin can now be configured via the web interface (see Chapter 5, Configuration).

5 Configuration

5.1 Logging in to the Robin

The Robin can be used accessed as an 'Administrator' or as a 'User'.

- The Administrator can configure all settings of the Robin. To initially configure the Robin you will need to login as an Administrator.
- The User can only watch live video and optionally control the door opener. A User can't modify settings of the Robin.

The login credentials can be changed in the web interface of the Robin. The default credentials are:

- Administrator Login: admin, Password: 123qwe
- User Login: user, Password: has to be defined

! Note: Change the password immediately after installation, both the Administrator and the User, (menu -System-Security-). The use of strong passwords is highly recommended !

The Robin will warn you when the default password for the Administrator hasn't been changed yet when logging in and will keep warning you until the default password is changed.

R 3BIN	ProLine SIP 5 MP IP camera (WideAngle) - 1 Button	version 3.6.9
	Username: Password; Topin	
	Login	

We assume here that the network supports DHCP ('Dynamic Host Configuration Protocol'); if so, all settings such as the IP addresses, netmask, gateway and DNS are automatically populated.

DHCP is a default setting of the Robin. If the network does not offer DHCP, the network details must be set manually.

5.2 Configuration of the Robin

The configuration program for the Robin features 5 sections; 'Telephony', 'Audio', 'Video', 'Network' and 'System'.

'Telephony'

In the 'Telephony' section, you configure all of the settings that are required for the communication part of the Robin.

'Audio'

In the 'Audio' section, various modifications to the sound and sound processing features of the Robin can me made, such as loudspeaker volume, microphone sensitivity and echo suppression.

'Video' (on Robin devices with integrated camera)

In the 'Video' section, you can optimise the image quality, view the live video and set the areas of the image to which the camera will respond (motion).

'Network'

In the 'Network' section, you can view and change the network configuration settings for the Robin.

'System'

In the 'System' section, you can view and change the settings that influence standard operation of the Robin. It also contains the 'log files', for easier problem solving.

! Note: In the Robin software you'll note 'APPLY SETTINGS' buttons. Use these buttons to confirm and activate all the changed settings. !

5.2.1 Telephony

5.2.1.1 Telephony / SIP

This is where you enter the data required for registering on an IP-PBX or with a VoIP provider. If the Robin is used for a direct connection (Peer2Peer / P2P) to the telephone handset (without using an IP-PBX or VoIP provider), registration is not required.

The Robin can make use of a second SIP proxy / Register server for failover purposes. It will only be activated if the 'Primary' server fails.

! Note: A secondary SIP proxy of Register server can only be used if both the SIP proxy or Register servers use the same login credentials. It is recommended to set the 'Expires' time to 300 seconds. (The maximum time between switching servers will be 5 minutes) !

 Video RTP port start 	Enter the lowest IP port that may be used for the RTP video stream
 Video RTP port end 	Enter the highest IP port that may be used for the RTP video stream
 RTP port random 	Use random RTP ports (within the specified range)
 Keep alive 	Enable keep alive packages
Enable REFER	Accept 'REFER' packages (off by default)

С

5.2.1.2 Telephony / Phonebook

Multiple telephone numbers can be entered in the phone book. These can be used as input elsewhere, for example when setting up 'Schedules'.

A 'Profile' can be associated with each 'Phonebook entry'. A 'Profile' is a set of audio and video settings. This allows definition of individual settings for each telephone number.

! Note: When 'Enable Teams mode' is activated, a default Teams profile is set. The 'Profiles' menu is hidden in 'Enable Teams mode'. *!*

When using a Robin ProLine with Keypad, an extra menu will be visible, called 'Preset'. Within the 'Preset' menu you can create a list with presets. Every preset can contain up to three phone numbers, for instance a fixed phone, a mobile phone and an extra phone. As soon as a preset is chosen using the Keypad, the intercom will first try to connect to the first number. If the first number is engaged or not answering it will continue wit the second number. If the second number is engaged or not answering it will continue wit the third number. Each preset can also contain an e-mail address and a PIN code. The e-mail address can be used for sending an e-mail containing a photo of the person using the intercom. The PIN code of (6 digits) can be used to open the door.

Description	The name that is associated with this number
 Number 	The value entered for the telephone number (see comment)
Profile	If required, you can select a 'Profile' for this number
 Allow register 	Select this option if the Robin SV has to support a 'Peer to Peer' connection with a telephone set*

- ! Note: The number can be entered in multiple ways.
 - 1. Just the number (e.g. 104, 1002, 6032 etc.). The handset is located on a connected IP-PBX in the same network or using a VoIP provider.
 - 2. The number, followed by the IP address of the handset that is to be dialled (e.g. 1000@10.0.0.53, 102@192.168.1.21 etc.). The handset and the Robin are connected to each other directly, i.e. the call is not routed via a IP-PBX or VoIP provider. The Robin SV dials the handset directly.

* Peer to Peer connection: If a direct connection between the Robin and a telephone set is required - without the use of a IP-PBX or VoIP provider - please check our whitepaper: How-To_Peer-to-ENG.pdf on the supplied USB drive or on our support website: http://support.robintele. com

Profiles:

Define profiles. A profile is a set of audio- and video related settings.

The green '+' creates a new line. The '>>' behind a line opens the details for this line. The red X behind a line deletes the line from the list.

 Video compatibility mode Apply settings 		

Call priority:

The Robin can dial up to three numbers in a set sequence. If the first number is engaged or not answering* it will continue wit the second number. If the second number is engaged or not answering it will continue wit the third number.

For the 2 and 4 button equipped Robins the call priority settings can be defined for each individual button.

•	First	Select the first number to dial
•	Second	Select the second number to dial
-	Third	Select the third number to dial

* Change the duration in -Telephony-Call settings-General- using the 'No answer timeout' option.

Schedules:

The Robin features a 'Schedule' function. The schedules can be defined in the menu -System-Schedules-.

This function allows you to set multiple timeslots: e.g. office hours, lunch break, etc. Consequently, during the lunch break the Robin can be set to dial a different telephone number from that configured for normal working hours.

The timeslots are not prioritised so they must be set consecutively, e.g.:

8:30-12:29 morning -> call reception 12:30-13:00 lunch -> call a mobile phone 13:01-17:00 afternoon -> call reception

! Note: When the 'Schedule' function is in use, timeslots take priority over the 'First, Second and Third' settings in -Telephony-Call settings-Call priority-. The intercom checks whether a timeslot is active based on the current time, if not, it reverts to the settings for 'First, Second and Third'. *!*

For the 2 and 4 buttons equipped Robins the schedule settings can be defined for each individual button.

Timeslots:

The green '+' creates a new line. The '>>' behind a line opens the details for this line. The red X behind a line deletes the line from the list.

Echo canceler	Select the echo canceller mode
 Denoise 	By default, all background noise will be filtered to improve the sound quality. In a loud environment the sound quality might improve by disabling this feature
Half duplex setting only:Vox level	Set the switch level of the microphone / speaker
 Vox hyst 	Modify this setting to smoothen the switch between sending and transmitting

 \mathcal{C}

Configuration

- Off, no echo cancellation
- Adaptive, active echo cancellation. Allows two-way simultaneous communication
- Half-duplex, makes use of sound detection to switch between speaker or microphone. This disables simultaneous two-way communication. You either speak or listen.

With the echo canceller set to 'half duplex' a 'Vox level' slider is visible. It allows you to set the switch level of the microphone / speaker

! Note: Tuning the 'Vox level' is necessary to establish good communication when set to 'half-duplex'. *!*

5.2.2.2 Audio / Detection

The Robin is capable of detecting sound through its microphone.

This detection can trigger 'Actions' such as activation of a relay switch or automatic calling to a phone set. These actions can be defined in the menu -System-Events-.

Depending on the location of the Robin and the type of sound that should trigger the detection, two parameters can be set: the volume and the duration.

Short audio spikes can be filtered by increasing the duration setting. Background noise can be filtered by increasing the threshold.

ROBINN Robin SmartView	venion dev-4457 Logged in as 'admin' (logout)
Settings Detection Media	
Audio detection	

Audio detection:

•	Enabled	Enable or disable the audio detection
-	Treshold	Change the volume threshold of the detection
-	Duration	Change the audio duration of the detection

The colour of the bars is green (= no detection) or red (= detection) The red line indicates the boundary of the detection area.

5.2.2.3 Audio / Media

The Media menu allows you to import audio files into the intercom and play them through the speaker. You can use this to change the tone of the button and the ringback tone, so you can customize the melody that plays when you use the Robin. Use it for:

- Events
- Phone related functions (button, ring back, ring, disconnect, busy)

5.2.3 Video (Robin with integrated camera)

5.2.3.1 Video / Live

Shows real time video captured by the camera. Double click on the image to toggle between full screen video or default size video.

By using the on-screen controls in the upper right corner of the image you can modify the brightness of the image.

The three buttons below the video frame functions as controls for the built-in relays switch. They are used for:

- Switching off (Close)
- Switching on (Open)
- Switch on and after a predefined time automatically off (Pulse)

! Note: These three buttons are only visible if the option: ' User can control door opener' (-System-Security-) is enabled. !

5.2.3.2 Video / Settings

You can change all the camera related settings here.

- Settings: settings that are associated with the video quality
- Image settings that are associated with the image quality
- Encoder: settings that are associated with the degree of image compression

Settings:

The 'Sensor mode' menu allows you to choose between two optimization profiles. You can choose between Performance or Quality.

- Performance The Robin settings are optimized to achieve the highest possible frame rate. The video quality will loose some detailing.
- Quality The Robin settings are optimized for the best video quality possible. The frame rate will be limited to approximately 15 frames per second.

The 'Resolution' menu allows you to select the video image resolution. Choose between 'VGA', 'SD' or 'HD'.

- VGA The video image will be presented with a vertical resolution of 480 pixels
- SD The video image will be presented with a vertical resolution of 576 pixels
- HD The video image will be presented with a vertical resolution of 720 pixels

The 'Sensor aspect' menu allows you to choose the preferred aspect ratio of the video image.

- 4x3 The default aspect ratio
- 16x9 Widescreen

Image:

Settings Image Encoder H.264 Encoder Brightness Contrast Saturation Auto gain control (AGC) Advanced agc settings Fluorescent light Auto white balance (AWB) Apply settings

Brightness	Changes the brightness of the video image
Contrast	Changes the contrast of the video image
 Saturation 	Changes the colour saturation of the video image
 Auto gain control (AGC) 	'Automatic Gain Control' automatically matches video image exposure to the light circumstances
 Fluorescent light 	Activate this function if artificial light sources in a room cause interference, e.g. TL strip lighting
 Auto white balance (AWB) 	'Auto White Balance' automatically matches the colour temperature of the video image to the circum-stances

Encoder:

Settings Image		
Octango intago	Encoder	H.264 Encoder
		,
Jpeg quality		70

 Jpeg quality 	Allows you to change the quality of the 'Live' video images in the web browser (higher quality but more
	bandwidth usage)

! Note: Higher quality will put extra load on the bandwidth. !

H.264 Encoder

Change the H.264 encoder quality. This will have an impact on the RTSP stream. The storage space and bandwidth required will increase at higher settings.

5.2.3.3 Video / AGC

Define a zone in the image that the AGC will use for the measurements.

The AGC (Automatic Gain Control) automatically matches video image exposure to the light circumstances. This option can be switched on or off at the -Video-Settings- menu.

Use the mouse to define a selection area in the image. Draw a frame in the video image and enlarge/reduce it by dragging the top left and bottom right corners. The red cross at the top removes the selection frame.

Make sure that the most important area in the image is selected for the AGC function. This will usually be the location where the people will stand when they use the Robin.

5.2.3.4 Video / Overlay

Use the overlay option to display extra information in the upper left corner of the video image.

Overlay:

Phony Audio Video	NT	Logger	version dev-4457 d in as 'admin' (logout)
e H.264 Settings AG	Overlay Motion		
Overlay			
Overlay Enable video overlay	0		
	0		
Enable video overlay			
Enable video overlayShow date and time			

-	Enable video overlay	Enable or disable the video overlay function
•	Show date and time	Display the date and time
•	Show device name	Display the device name (change the device name in -System-Device-)
•	Show device location	Display the location of the Robin (change the loca- tion in -System-Device-)
•	Additional overlay text	Display additional text

 \mathcal{C}

5.2.3.5 Video / Motion

Motion allows you to select parts of the video image where you want movement to be detected.

Detection of movement can trigger 'Actions' such as an acoustic signal, switching a built-in relay or initiating a call to a telephone. The actions are set in -System-Events-.

Use the mouse to select an area in the image. Draw a frame in the video image and enlarge/reduce it by dragging the top left and bottom right corners. The red cross at the top removes the selection frame.

Consider how to minimise the chance of a false alarm when selecting the zones. For example, avoid objects that move in the wind such as flags, branches on trees, etc.

Both detection sensitivity and the size of the object you want to detect can be adjusted. The graph at the bottom of the image allows you to verify whether the settings are correct.

The colour of the bars is green (= no detection) or red (= detection) The red line indicates the boundary of the detection area.

Motion detection:

•	Enabled	Activates Motion detection
-	Sensitivity	Increases/reduces detection sensitivity
-	Object size	Changes the size of the object to detect by the Robin

! Note: To make tuning the Motion settings easier, no 'Events' that may have been set will be activated when the -Video-Motion- window for the Robin is open. When you close the -Video-Motion- window, detection is enabled again. !

5.2.4 Network

5.2.4.1 Network / Status

5.2.4.6 Network / RTSP

The Robin is able to stream the video and audio through RTSP. Most video management software (VMS) solutions use the RTSP standard*. The Robin uses H.264 for video and G.711 uLaw for audio.

! Note: The Robin uses the RTP over RTSP (TCP) standard. Not every VMS solution supports audio over RTSP. *!*

For more information regarding RTSP support of the Robin in combination with VMS solutions see the document: How-To_RTSP_ENG.pdf on the supplied USB drive. You can also download this document on our support-site: http://support.robintele.com

Settings:

 Enable RTSP server 	Enable RTSP support
RTSP port	Change the RTSP port (default 554)
Require authentication	Use RTSP authentication

5.2.5.2 System / Clock

Change date and time related settings for the Robin.

Telephony Audio Video	ENT	version dev-4474 Logged in as 'admin' (logout)
Device Clock Events	Security Recording Schedules Software Streams Switch Info Debug Logs	
 Timezone Current time Method NTP server address NTP status Apply settings 	Europe/Amskardam • 2015-07-08 09:39:05 +0200 (NTP •) poolints.org Synchronized to server *83.98.201.134*	
	© Copyright 2009-2013 Robin Telecom	

Date and time:

•	Timezone	Select the right time zone
-	Current time	Shows the current date and time settings
-	Method	Allows you to choose between manual or automatic (NTP) time setting
-	NTP server address	Enter the address or name of the time server here.
-	NTP status	Shows the status of the selected time server
•	Set time	Enter the date and time here (manual setting)

! Note: The Robin does not feature a build-in backup battery. Every time the Robin reboots both the date and time need to be set. By default it will use an NTP server to set the date and time. In case of a 'manual' setting, this has to be done by hand after every reboot. We strongly recommend the use of an NTP server.!

5.2.5.3 System / Events

The Robin is equipped with various automation options. For example, starting an outgoing telephone call to a predefined number, the sending of an e-mail containing a photo of the person using the intercom, the playback of an audio message etc.

All actions are triggered by an Event (source). An event source can be movement in front of the camera, a loud noise that exceeds a predefined volume, a push on the button of the intercom or other sources. You can select the various events sources here and set the response action that take place when an event occurs.

Event actions can be set to be time bound using the 'Schedule' mechanism of the Robin. That way an action can only start within a time slot, eg. lunch or after work hours. Definition of the schedules can be done in the menu -System-Schedules-.

Sources

Define the events:

- Audio Triggers if audio is detected (VOX detection) See menu -Audio-Detection-
- Button Triggers when a button is pushed or a preset is chosen on the Keypad (Choice: button 1, 2, 3, 4, 5, 6 or Keypad)
- **Call** Triggers when a call is set up (Choice: incoming or outgoing)
- Dtmf Triggers when a combination of two keys are pressed during a phone call, starting with a '*' followed by another key (Eg. *1, *7 etc.) (Choice: 0-9, or #)
- Http Triggers if a http call is detected (default http://<IP-ADDRESS-ROBIN> /evmgr/emit). The 'emit' part in the URL is variable and can be changed in every other word. Change this in the field: 'HTTP path'
- Kadex Triggers when a signal is detected coming from a Kadex home automation server. The Kadex event on which it needs to trigger can be set in the field: 'Event name'. As soon as this Event is set, the sub-menu 'Kadex' will be visible. Use this to fill-in the Kadex server details.
- Motion Triggers when motion is detected by the camera See menu -Video-Motion-
- Pin Triggers when a correct PIN code is detected (Robin with Keypad) See menu -Telephony-Phonebook-, Presets
- Ring Triggers when a 'ring' is detected (incoming or outgoing)

	None Pin Ring		© Copyright 2009-2013 R	bbin Telecom	

The green '+' creates a new 'Event' . The '>>' behind a line opens the details for this 'Event'. The red X behind a line deletes the 'Event' from the list.

-	Name	The name that is associated with this event source
-	Enable	Enable this event source
-	Active	Shows whether an event source is active
-	Туре	Selects the type of event source
•	Min duration	Set the event source minimum duration. It extends the time an event is active by adding the initial time an event is active with the min duration. Eg. the Button event takes approx. $0,5$ sec. Modify the min duration to 2 sec. makes $0,5 + 2 = 2,5$ sec.

 \mathcal{C}

Actions:

Define the actions:

- **Beep** Starts playing a beep through the intercom (Choice: frequency of the beep)
- **Call** Start a phone call to the default phone number(s) (Choice: *Allow hangup* (on/off): When on, a repeated source input also disconnects the call)
- **Http** Emits a http command. (*two URLs*: one if the source becomes active and one if the source becomes inactive)
- Iqmessenger Emits a URL to the IQ Messenger system (One URL: URL of the used IQMessenger system)
- Kadex Emits an event to a Kadex home automation server. (Kadex event: Name of the in the Kadex defined event). As soon as this Action is set, the sub-menu 'Kadex' will be visible. Use this to fill-in the Kadex server details.
- Mailjpeg Send an e-mail containing a photo of the person using the intercom to a predefined e-mail address - For the Robin Keypad, see menu -Telephony-Phonebook- Presets. For the Robin with 1,2,4 or 6 buttons, see menu -Telephony-Call settings- Call priority.
- Playback Plays an audio file (*Mediafile*: choose a file, *Playback loop*: play once or play in a loop) See menu -Audio-Media-
- Recording Start a local video recording*
- Switch1 Switch the internal relay switch in the Robin SV
- Webrelay Switch a relay switch on an external relay unit from ContolByWeb; WEBRelay (Address: the IP adres of the WEBRelay Relay (1-4): the relay to switch Action (on/off/ pulse): on, off or pulse the relay switch (user selectable pulse time) Use authentication: when a password is demanded to switch the WEBRelay)**

The green '+' creates a new 'Action' . The '>>' behind a line opens the details for this 'Action'. The red X behind a line deletes the 'Action' from the list.

Name	The name that is associated with this event action
Enable	Enable the event action
• LED	Not used
 Source type 	Selects the event source for which this event action is the response
 Edge 	Start the event action at the beginning of the event source, the ending of the event source or on both (rising / falling / both)
 Action type 	Selects the type of Action.
 Schedule 	Select a defined schedule

* : The recording of video on the internal SD card is only possible if the 'Recording' feature is enabled. See menu -System-Recording-. Note: The recordings are not directly available for playback! An API is available to retrieve the recordings. This API can be used for development of an App to make the recordings available for playback. See the "How-To_Remote_Control" PDF on the supplied USB stick or on the support website: support.robintele.com

** : For more information about the Robin / WEBRelay, see Tech-Note: "How-To_Robin_and_ WEBRelay" PDF on the supplied USB stick or on the support website: support.robintele.com !

5.2.5.5 System / Recording

The Robin is able to record video on the internal SD card. Select the option 'Recording' to activate it.

! Note: The recordings are not directly available for playback! An API is available to retrieve the recordings. This API can be used for development of an App to make the recordings available for playback. See the "How-To_The_Robin_API_3.x.x.pdf" PDF on the supplied USB stick or on the support website: support.robintele.com !

5.2.5.6 System / Schedules

The Robin has multiple functions that can be made time bound. Use this schedule menu to create timeslots: e.g. office hours, lunch break, etc. Consequently, during the lunch break for example, the Robin can be set to dial a different telephone number from that configured for normal working hours.

The timeslots are not prioritised so they must be set consecutively, e.g.:

8:30-12:29 morning -> call reception 12:30-13:00 lunch -> call a mobile phone 13:01-17:00 afternoon -> call reception

5.2.5.7 System / Software

New software versions for the Robin are released regularly. These versions include improvements and often introduce new functions.

Updating is a two-stage process; the first step is to check whether new software is available. If so, you can initiate the upgrade to the latest version.

After the upgrade, the Robin has to reboot.

Backup:

■ Ba	Backup configuration	You can make a backup of the settings using the 'Download' button. A file called 'Backupsettings.txt' is downloaded to the PC
		You can restore a backup to the Robin using the 'Up- load' button. First, you select a backup file that was created earlier. After restoring the backup, the Robin must be rebooted

Tools:

•	Restart Robin appli- cation	Starts the Robin software up again. This is faster than rebooting the device
•	Reboot device	Reboots the complete device. It may take 30 seconds before the Robin is active again
•	Restore application defaults	Restores the default settings for the Robin

Updates:

•	Check for new soft- ware versions	Checks whether new software is available
-	Currently running ver- sion	Shows the current software version
-	Currently installed version	Shows the software version that has already been installed
-	Upgrade to latest ver- sion	Downloads the latest version of the software and installs it on the Robin

! Note: Internet access for the Robin is necessary to update the software of the Robin. !

5.2.5.8 System / Streams

The 'Streams' menu shows all active video streams.

	Copyright 2009-2013 Robin Teleponin	

! Note: Not more then 3 simultaneous video streams are recommended. If more streams are active, functioning of the intercom might become disturbed. !

5.2.5.9 System / Switch

The Robin has a built-in voltage free relay contact. It can be used to open a door or a gate. When a connection has been established between the Robin and a telephone handset, the relay switch can be operated via key combinations on the telephone.

For examples on how to connect the Robin to an electronic door lock, see: 'Appendix B, Electronic lock'.

5.2.5.11 System / Debug

The Robin features a built-in 'Debug' function. This allows you to create a 'Network trace' of all the network traffic to and from the Robin. This tool allows for a fast and effective resolution of problems with the Robin.

The 'Go to Robin' function enables remote support to the unit. It connects the unit to Robin Telecom Development and can be used for remote support.

! Note: Go to Robin will only work after contacting the support department of Robin Telecom Development. !

Log settings:

•	Max lines to keep in log	The number of log file lines that are stored
•	Download	Download the log file to the PC

Application log:

•	Timestamp	Time stamp for the log entry
-	Log level	The log entry classification
•	Class	The software component in the Robin that led to genera- tion of the entry
•	Message	The actual log message

For details of special settings, requests for support and FAQs, please use our 'online' support page: http://support.robintele.com

S

Appendix A, List of key words

Default setting: Standard programme setting.

DHCP:

'Dynamic Host Configuration Protocol'.

Computer protocol that describes how a computer can obtain its network settings from a DHCP server.

DNS:

'Dynamic Name System'. Protocol for managing domain names and IP addresses on the Internet.

DNS server:

This is the system that compares all the domain names and IP addresses in a database with each other and links them with the aid of a DNS server.

End-to-end:

The 'end-to-end' principle is one of the core principles of the Internet and is reflected in the design of the underlying methods and protocols of the 'Internet Protocol Suite.'

The principle is based on definition of the communication protocol actions in such a way that they take place at the 'end points' of a communication system, or as close as possible to the source that is to be verified.

Gateway:

A 'gateway' is a network point that acts as a "door" to a network other than the local network.

GUI:

'Graphical User Interface'.

The graphical user environment is a tool for interacting with a computer that uses graphical images and text.

HTTP:

'Hypertext Transfer Protocol'.

http is the protocol for communication between a web client (generally a web browser) and a web server. This protocol is not just commonly used on the World Wide Web, it is also used in local networks (which we call an intranet).

IP:

'Internet Protocol'.

This is the part of the system that is used to allow computer networks to communicate with each other via other networks, such as the Internet.

LAN:

'Local area network'.

Local area network of two or more computers that are connected with each other, either directly or via a shared medium.

MAC (address):

'Media Access Control'.

The MAC address is a unique identification number that is allocated to a device in an Ethernet network.

Hardware address is another name for the MAC address. It ensure that the devices in an Ethernet network can communicate with each other.

Midspan (PoE):

A Midspan (PoE) is a device that injects power over a standard Ethernet connection.

NAT:

'Network Address Translation'.

Network Address Translation, for which the terms Network masquerading or IP-masquerading are also used, is the translation of IP addresses and often also TCP/UDP port numbers from one separated range to another. Often used to allow multiple users of a home network to access internet via a single IP address.

Netmask:

Binary number that is used to create a subnet.

NTP:

'Network Time Protocol'. A protocol that is used by the time server.

PBX:

'Private Branch Exchange'. Abbreviation used for a business telephone exchange for private use.

PoE:

Power over Ethernet.

A system for delivering power and data via an Ethernet network.

Proxy server:

A proxy server is one that is located between a user's computer and the computer where the information the user wants is stored.

SIP:

Appendix A

'Session Initiation Protocol'.

A protocol that makes multimedia communication (audio, video and other data communication) possible and used among other things for the Voice over Internet Protocol (VoIP).

STUN:

'Session Traversal Utilities for NAT'. 'STUN' is a protocol or tool that is used when applying NAT.

Time server:

A 'time server' is a network computer, which reads the time from a clock that has been allocated to it and transfers this information to other computers that use the same network.

VoIP:

'Voice over Internet Protocol'.

A protocol that uses the Internet or another IP network to transport speech.

Web GUI:

A web browser-supported graphical user environment (see also GUI).

Appendix B, Electronic lock

The Robin has a built-in voltage-free relay contact. The Robin is not able to power a electronic lock, a power supply is required.

There are many different electronic locks on the market. We advise to use the prescribed method of the electronic lock manufacturer to connect the Robin.

This Appendix shows two common ways to connect the Robin to the electronic door lock. That doesn't mean that these two options are the only options possible!

Basic electronic door lock with power supply:

Electronic door lock with input contact on the control box:

! Note: The relay switch of the Robin doesn't supply power for the electronic lock! Make sure that the switched voltage does not exceed 24V and the switched power is max. 18W. !
